CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1874.

REPORT:— PAGES

General Review of Facts for the Year . . . . . v–vii

Emigration from the United Kingdom . . . . . vii–viii

Increase of Population and Influence of Emigration thereon . viii

Meteorology at Greenwich; Prices of Wheat, Meat and Potatoes; and Pauperism . . . . . viii–ix

Marriages. Number celebrated according and *not* according to the Rites of the Established Church; Conditions of Persons married; Ages of Persons married; Marriages of Minors; Signatures of Marriage Registers; Educational condition of different Counties, as shown by the Signatures of Marriage Registers; Buildings registered for the Solemnization of Marriages; Certified Places of Worship; Designations of Religious Bodies . . . . . x–xiv

Births. Number registered; Birth-rate; Sex; Children born *in* and *out of* Wedlock . . . . . xiv–xv

Deaths. Number registered; Death-rate; Sex; Age; Mortality of Males and Females at various Ages; Seasons; Locality; Death-rate of Children under Five Years of Age, and under One Year of Age; Deaths in Public Institutions . . . . . xv–xxiv

Progress of Registration. Aggregate Number of Names on the Registers, Particulars as to the Alphabetical Index to the Names, and Number of Searches in the Registers and of Certificates granted at the Central Office . . . . . xxiv–xxv

United Kingdom. Population, Emigration, Marriage, Birth, and Death Rates xxv

The Army. Strength and Mortality of the Army at Home and Abroad . . . . . xxv–xxvi

The Navy. Strength and Mortality of the Navy . . . xxvi

Births and Deaths of British Subjects at Sea; Marine Register Book; Mortality by Drowning in the Merchant Service compared with that in the Royal Navy . . . . . xxvii–xxviii

Wills. Calendars of Grants of Probate and Administration kept at the General Register Office; Numbers and Values of Probates and Administrations xxviii

European States. Marriage, Birth, and Death Rates; and Density and Proximity of Population . . . . . xxviii–xxxi

Meteorology; Remarks by James Glaisher, Esq., F.R.S. . . xxxii–xxxiv

Preliminary Tables . . . . . xxxv–xcviii

ABSTRACTS:—

Marriages Registered in England in each of the Registration Divisions and Counties, and Districts; distinguishing those according and those *not* according to the Rites of the Established Church; in each quarter of the year; and distinguishing also Persons married according to their conjugal Condition, Minority, and Signature of the Register by marks 2–25

Ages of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 26–28

Marriages, Births, and Deaths Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also Births and Deaths and Excess of Births over Deaths in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout 30–84

ABSTRACTS—*continued.* PAGES

Births Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 86–89

Births of Children born out of Wedlock Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 90–93

Deaths Registered in Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 94–97

Deaths of Males and Females in Public Institutions 99–118

Deaths of Males and Females at different Ages Registered in Divisions, Counties, and Districts 120–141

Causes of Death of Males and Females in England at different Periods of Life 144–149

Supplementary Table of Causes of Death of Males and Females in England at different Periods of Life 150–153

Causes of Death of Males and Females in London at different Periods of Life 154–159

Causes of Death of Males and Females in England, and in each of the Divisions and Counties 160–183

Deaths from several Zymotic and other Causes, and Inquest Cases, in the Divisions, Counties, and Districts of England . 184–195

Violent Deaths in England, distinguishing Sex and Age 196–201

Violent Deaths in each of the Eleven Divisions of England, distinguishing Sex 202–206

Deaths returned as having occurred from Suicide in England, distinguishing Sex and Age 207–208

Deaths returned as having occurred from Suicide in each of the Eleven Divisions of England, distinguishing Sex 209–210

Deaths returned as having occurred from Murder and Infanticide in England, distinguishing Sex and Age 211–212

Deaths returned as having occurred from Murder and Infanticide in each of the Eleven Divisions of England, distinguishing Sex . . 213

Deaths returned as having occurred from Manslaughter in England, distinguishing Sex and Age 214–215

Deaths returned as having occurred from Manslaughter in each of the Eleven Divisions of England, distinguishing Sex 216

APPENDIX.

LETTER TO THE REGISTRAR-GENERAL ON THE CAUSES OF DEATH IN ENGLAND, by WILLIAM FARR, Esq., M.D., F.R.S. :—

Causes of Death :—

(1) *Zymotic Diseases* 219–221

(2) *Constitutional Diseases* 221

(3) *Local Diseases* 222

(4) *Developmental Diseases* 222

(5) *Violence* 222–224

Tables 225–258

Index of Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts 259–273

REPORT

TO

The Right Honourable George Sclater-Booth, M.P., President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st July 1876.

(1874.)

Sir,

I have the honour to submit to you my Thirty-seventh Annual Report on the Registration of Births, Deaths, and Marriages in England.

This is the last year that registration has been carried on under the old Acts, and the results admit of strict comparison; my next Report will enable me to discuss the effect of the changes under the new measure, which you introduced in 1874 on the part of the Government, and which received Her Majesty's sanction.

Births, deaths, and marriages are so important,—connecting as they do, successive generations, and reflecting vividly the happiness or misery of families,—that they demand every year attention. It is not with these events a mere question of money, or of fluctuations of prosperity that come and go, but of life.

I have continued the publication of my Weekly and Quarterly Returns, which have proved of much use for administrative as well as scientific purposes. The weekly table appears on every Wednesday, and gives an ample analysis of the births and deaths and causes of death in the Metropolis during the previous week. I have added to it weekly returns for the Outer Ring of London, and for all the great cities of the United Kingdom.

The facts in the Quarterly Return are compiled rapidly by the Registrars, from their register books, and I am thus able to publish the number of births and deaths in each of the 2195 sub-districts of England and Wales within a month of the end of every quarter of the year.

The returns of marriages being made in part by the clergy of the Established Church, and not by my own officers, do not reach this office in time to enable me to do more than publish the number of weddings in the second quarter following their occurrence.

The weekly Table of Mortality is an old London institution, improved, I hope, if not perfected; and now its utility is very much increased by its

including corresponding returns from Calcutta, Bombay, and Madras, in our Indian Empire; from Paris, Brussels, Amsterdam, Rotterdam, the Hague, Copenhagen, Stockholm, Christiania, Berlin, Hamburg, Breslau, Munich, Vienna, Buda-Pesth, Rome, Naples, Turin, and Florence, in Europe; from Alexandria in Africa; from New York, Brooklyn, Philadelphia, and Boston, in North America. The births and deaths, distinguishing deaths from the principal zymotic diseases, are sent to me, and published weekly. Thus observers, like watchmen on the walls, are ever on the look out, so that men see exactly what is going on, and neither plague, cholera, nor any other great epidemic can take the nations by surprise.

Statistics are cultivated in Russia, and I hope ere long to be able to add the capitals of that empire to the other cities whose authorities now co-operate in carrying out this great system of hygienic observation.

The doctrines of population were never more important than they are in the present day, and I trust that the series of facts in these reports will be of use to political students in enabling them to solve the problems in which this kingdom,—the mother of so many colonies,—is so deeply interested. The age at marriage in all cases, and the age of parents at the births of their children, appear now to be all that the English schedules want to meet the requirements of physiological and statistical science.

There can be no doubt that large sums of money have been expended here and there in recent years on sanitary works of various descriptions; and the country naturally expects to see the fruits of the expenditure. Has the money been wisely expended, or has there been a failure either in the schemes of work, in the skill of engineers, or in the medical officers of health? Have they not understood the highest truths of hygienic science as they were taught by Professor Parkes, whose loss the country has to deplore? or have the municipal and other sanitary authorities not yet completed what they have undertaken? What is certain is that the mortality of the whole population, though not so low as it is in some countries is much lower than it is in large empires. That the health of the people is not stronger is partially due to the increasing density of the population; without corresponding arrangements for lodging them, for supplying them with pure water, for preventing the discharge of black smoke into the air they breathe, or for carrying away impurities to the earth to which they belong. This question has already been intelligently discussed by Dr. Buchanan;* but I have thought it well, with the observations of thirty years before me, to inquire especially into the connexion between great reductions in the mortality and genuine sanitary works. The result is decisive; there remains no question that the increased salubrity of several towns and districts is due to sanitary measures. Where no such effects follow improvements the improvement is only apparent, or the works are imperfect.

Considering the mining and manufacturing operations, the industries of every kind going on, and the aggregation of great numbers of people in cities, this greater London alone holding within 15 miles of Charing Cross more than four millions of people, the progress of the health of England since the seventeenth century when the great plague ravaged London is a source of congratulation. Much undoubtedly remains to be done. But the Medical Council is growing alive to the importance of the systematic study of State medicine. A body of Health Officers second to none in skill, and devoting themselves wholly to conservative medicine will be called into existence, by attractions as great in the counties and cities as

---

* See Report by Dr. Buchanan on the results which have hitherto been gained in various parts of England by works and regulations designed to promote the public health.—9th Report of the Medical Officer of the Privy Council, pp. 40–208.

private practice offers. If engineers, chemists, and agriculturists in the end solve the sewage and water questions satisfactorily; if dwellings are built and regulated so as to be noxious no longer in village, town, or city, the returns of Death—that impartial, inexorable inspector,—will bear testimony to the efficiency of all the Health Departments.

Increase of Population.—The returns published by the Marine Department of the Board of Trade show that the number of emigrants, who left the United Kingdom in 1874 for places out of Europe was 241,014 or 69,598 less than in 1873.

An attempt has been made to distinguish *bonâ fide* settlers from passengers, but it has hitherto proved unsuccessful.

The annexed Table shows the nationality of the emigrants from the Ports of the United Kingdom during the last twelve years :—

Years.	English.	Scotch.	Irish.	Foreigners.	Not distinguished.	Total.
1863	61,243	15,230	116,391	7,833	23,061	223,758
1864	56,618	15,035	115,428	16,942	4,877	208,900
1865	61,345	12,870	100,676	28,619	6,291	209,801
1866	58,856	12,307	98,890	26,691	8,138	204,882
1867	55,494	12,866	88,622	31,193	7,778	195,953
1868	58,268	14,954	64,965	51,956	6,182	196,325
1869	90,416	22,559	73,325	65,752	5,975	258,027
1870	105,293	22,935	74,283	48,396	6,033	256,940
1871	102,452	19,232	71,067	53,246	6,438	252,435
1872	118,190	19,541	72,763	79,023	5,696	295,213
1873	123,343	21,310	83,692	72,198	10,069	310,612
1874	116,490	20,286	60,496	38,465	5,277	241,014

After distributing, proportionally, 5277 emigrants whose birth places were not distinguished, the number of *English* emigrants during the year 1874 was 118,855, of Scottish 20,663, of Irish 61,964, and of Foreign 39,532.

The falling off in 1874 was in the emigration to North America, the number of emigrants being 96,670 less than in 1873, viz., 84,912 less to the United States and 11,758 less to British North America.

This large decrease, so far as regards natives of this country, is attributed partly to the rise in the rates of wages here, and partly to the general commercial depression and the unprofitable state of the labour markets in the United States. The latter reasons probably account for the large decrease in the number of foreigners who passed through this country during the year.

Number of Emigrants to the United States and to the North American Colonies in 1873–74.

Years.	English.	Scotch.	Irish.	Foreign.	Total.
1873	100,397	17,988	81,438	70,458	270,281
1874	73,269	12,288	52,281	35,773	173,611
Decrease in 1874 -	27,128	5,700	29,157	34,685	96,670

The following results show the most noteworthy feature in the emigration returns of 1874, viz., the large increase in the number of emigrants to the Australian Colonies.

NUMBER of EMIGRANTS to the AUSTRALIAN COLONIES in 1873–74.

YEARS.	English.	Scotch.	Irish.	Foreign.	Total.
1873	19,002	2,881	3,506	1,039	26,428
1874	36,593	7,057	8,985	1,323	53,958
Increase in 1874 -	17,591	4,176	5,479	284	27,530

This large increase is mainly due to free and assisted passages being now offered by the agents of several of the colonies to artisans and others. It is believed, however, that the numbers have been swelled by unsuccessful emigrants who have returned from the United States.

The number of returning emigrants is not distinguished in the returns, but it was shown in the Census Report of 1871 that large numbers of emigrants to the Colonies and to the United States do return to England, and the average annual number in the ten years 1861–70 was estimated to be about 25,000.

The number of persons *who landed* in this country from passenger vessels in 1874 was 118,129 being the largest number on record. The results in each of the years 1870–74 were as follows :—

Years.	Number of persons landed in this country from passenger vessels.
1870 - - -	49,157
1871 - - -	53,827
1872 - - -	70,181
1873 - - -	86,416
1874 - - -	118,129

It would be instructive to know how many of these consisted of persons who had previously left these shores as emigrants.

100,527 or more than 85 per cent. of the immigrants in 1874 came from the United States, and it is believed that the greater part of these were artisans unable to obtain remunerative employment there owing to the depressed state of the markets.

The growth of the population in England and Wales in 1874 occasioned by the excess of births over deaths was 328,324 but this does not represent the true increase ; emigration, immigration, and unregistered births are elements which have to be taken into consideration in arriving at a correct estimate of the increase. The estimated population at the middle of the year 1874, based on the actual rate of increase during the 30 years 1841–71 was 23,648,609.

Meteorology.—The principal meteorological features of the year 1874 were the deficient rain-fall all over the country, and the extraordinary period of cold weather during the last six weeks of the year. Only 20 inches of rain fell at Greenwich during the whole twelve months. This quantity was 10 inches less than that in 1872 and 5·4 inches below the average annual fall. The mean temperature of the air was 49°·3, or nearly the same as the average.

The mean temperature of January was remarkably high being 5·4 above the average of 103 years. In May, three weeks of low temperature succeeded seven weeks of warm weather, and the excesses of temperature

towards the end of April were as much as 10° and 13°. From 21st November to the 1st January 1875, the cold was severe, on some days in December the temperature was as much as 14° in defect of the average. On the 31st December it was painfully cold, being as much as 16½° in defect.

The meteorology of this year 1874 is fully described by Mr. Glaisher, F.R.S., in his remarks on pp. xxxii–iv, who also shows in his tables the meteorological variations at different places. See pp. civ.–vii.

Prices.—Strikes and disputes between masters and men during the year 1874 brought various important industries to a stand-still. Wages in the mining, iron and steel trades fell. The price of commodities and the wages of labour generally declined. The excessive prices of previous years retarded and in some cases prohibited consumption.

The harvest was the best and most abundant since that of 1868. The quantity of wheat imported for home consumption was 41,527,638 cwts., or 2,335,460 cwts. less than in 1873, and the price of wheat was lower: a reduction in the quantity imported for home consumption generally indicating a plentiful harvest.

Years.	Quantities of Wheat imported for Home Consumption.	Average Price of Wheat per Quarter in England and Wales.	
	Cwts.	*s.*	*d.*
1865 - -	20,962,963	41	9
1866 - -	23,156,329	49	11
1867 - -	34,645,569	64	5
1868 - -	32,639,768	63	9
1869 - -	37,695,828	48	2
1870 - -	30,901,229	46	10
1871 - -	39,389,803	56	10
1872 - -	42,127,726	57	1
1873 - -	43,863,098	58	8
1874 - -	41,527,638	55	9

The autumn and winter of 1873 were very favourable for sowing the wheat crop of 1874, and the extent of land under wheat in England and Wales amounted to 3,509,309 acres: more by 139,655 acres than in 1873.

Both beef and mutton were somewhat cheaper in 1874 than in the previous year.

The average price of beef by the carcase at the Metropolitan meat market ranged from 5⅛*d.* to 8⅛*d.* per lb. The prices of mutton ranged from 5⅛*d.* to 8*d.* per lb. Best potatoes at the waterside market were much cheaper than in 1873, being 111*s.* per ton instead of 158*s.* 6*d.* per ton.

Pauperism.—The returns of pauperism were lighter. The average number of paupers relieved on the last day of each week was 137,197 in-door, and 609,328 out-door, against 137,775 in-door, and 656,843 out-door in the previous year.

The annexed statement shows the results of four Censuses of paupers on the 31st December 1871–4 exclusive of lunatics in asylums and vagrants.

	In-door.	Out-door.	Total.
1871 - -	150,093	780,809	930,902
1872 - -	147,657	690,979	838,636
1873 - -	144,201	637,269	781,470
1874 - -	146,947	603,468	750,415

The decrease from 1873 to 1874 was 31,055, or 4·0 per cent.

Marriages.

The state of trade and national industry is strikingly exhibited in the fluctuations in the marriage-rate (persons married to 1000 population) of the last nine years, 1866–74.

The period of commercial distress which began about the middle of 1866 did not diminish the number of marriages to any extent in that year, for the rate was high, 17·5; but this period of depression continued during five years, 1867–71, and influenced the marriage-rates of those years, which were 16·5, 16·1, 15·9, 16·1, and 16·7 respectively.

In 1872 and 1873 the working classes became excited under the rapid advance of wages and diminution in the hours of labour, and the marriage-rates rose to 17·5 and 17·6 respectively.

In 1874, a year of commercial difficulties, a re-action set in; the great trades of iron, coal, hardware, and shipbuilding were somewhat depressed: there were contests between masters and men, and reduced demand for labour brought down wages, so the marriages in the year 1874 were 202,010, or 3605 below the number in 1873, and the rate was 17·1.

The number of marriages in proportion to population varies in the different counties. High rates prevailed in the metropolitan and manufacturing counties—the great centres of commercial industry—where the skilled artizan and the industrial classes have opportunities of earning high wages, while in the agricultural counties, where the wages of the labouring population were comparatively low, the marriage rate was also low.

Forms of Marriage.—Of the 202,010 marriages in the year, 150,819, or 75 per cent., were solemnized according to the rites of the Establishment, and 51,191 or 25 per cent. not according to the rites of the Establishment.

The marriages by licence were 17,659; these have decreased more or less during the last 15 or 20 years, while the marriages after banns, which were 128,462 in 1874, have increased during the same period. The number by Superintendent Registrars' certificates was 3808, while in 860 cases the clergy omitted to state under which of the foregoing heads the marriages should be recorded; the number of such omissions is gradually decreasing, but it is to be regretted that they are still to be counted by hundreds.

The marriages among Roman Catholics in 1874 were 8179, the numbers during the last ten years fluctuated from 7231 to 8911. In some cases of mixed marriages between Protestants and Roman Catholics the couples were married twice, and were counted twice in the registers. The number of marriages among other Christian denominations was 21,253, about the same number as that performed at the Superintendent Registrar's office, 21,256. The marriages according to Quaker rites were 47 against 79 in the previous year. The marriages among Jews are increasing; the number in 1874 was 456.

Of 100 couples who married in 1874 according to the rites of the Established Church ·02 married by special license, 11·71 by license, 85·18 after banns, and 2·52 by Superintendent Registrar's certificate, while in ·57 per cent. it was omitted to be stated under which heads the marriages should be classed. Of 100 weddings not according to the rites of the Established Church there were 15·98 in Roman Catholic chapels, 41·52 in registered places belonging to various other Christian denominations, ·09 among Quakers, ·89 among Jews, and 41·52 at Superintendent Registrars' Offices.

First Marriages; Re-marriages.—202,010 marriages were contracted in 1874. Of the bachelors who married, 165,018 chose spinsters, while

9295 selected widows. The number of widowers who married spinsters was 16,459, while 11,238 widowers married widows, so 27,697 widowers, re-married, and 20,533 widows re-married. The number of persons, therefore, who married a second time in 1874, was 48,230. There is but little fluctuation in the proportions from year to year.

The number of marriages of divorced persons in 1874 was 61, viz., 59 in which one or other of the contracting parties is stated to have been previously divorced, and 2 in which divorced men married divorced women. Of 34 divorced men who re-married, 27 married spinsters, 5 married widows, and 2 married divorced women. Of 29 divorced women who re-married, 18 were married to bachelors, 9 were married to widowers, and 2 were married to divorced men.*

The number of these marriages is increasing. Only 29 were registered in the year 1862, whereas in 1868 there were 40, and in 1873, 62. In the 14 years 1861–74, there were 537, viz., 524 in which one or other of the contracting parties had been previously divorced, and 13 in which divorced men married divorced women.

Ages at Marriage.—The marriage registers are imperfect; the precise ages of the married not being returned in a considerable number of cases. Of the 202,010 marriages registered in 1874, the ages of *both* parties were stated in 149,848 instances only, so that in 52,162 cases the Officiating Minister, or Registrar of marriages, returned the words "of full age," "minor," or "under age," as the case might be.

This is to be regretted, for if all the ages were returned, it would afford the means of determining with greater accuracy the mean age at marriage in England, the probable duration of the joint lives of husband and wife, the annual rate of marriage at different ages, and many other important social questions.

The returns are less imperfect now than they were in 1855, when the ages of both parties were not returned in 42 per cent. of the total marriages, whereas in 1874, 26 per cent. was the proportional number of cases of imperfect returns.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table :—

Years.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	Years.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1855	42·3	1865	35·1
1856	42·1	1866	33·6
1857	40·9	1867	33·5
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8

* The number of decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes in the year 1874 was, nisi 284, absolute 194.

The annexed table shows the proportion of imperfect returns in the year 1874 in each registration division of England and Wales :—

Groups of Counties.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	Groups of Counties.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
Yorkshire - - -	10·7	South Eastern Counties -	28·2
Northern Counties -	14·6	Eastern Counties - -	28·3
Monmouthshire and Wales	14·6	South Western Counties -	28·2
North Western Counties -	18·1	South Midland Counties -	31·3
West Midland Counties -	21·6	London - - -	52·8
North Midland Counties -	24·7		

Yorkshire supplied the greatest proportional number of perfect returns, but even in this county the ages of both parties were not stated in the marriage register in 11 instances out of every 100 marriages. In Wales, and in the Northern counties of Durham, Northumberland, Cumberland, and Westmorland, the proportion per cent. of imperfect returns was 15, in Lancashire and Cheshire 18 per cent. The groups of counties furnishing very imperfect returns were the South Midland, 31 per cent., the South-eastern, Eastern, and South-western, 28 per cent. But it is in London that the returns were most imperfect, for there the ages were omitted by the Officiating Minister, or Registrar of marriages, to the extent of 53 per cent.

The mean age at marriage as determined from the 149,848 persons whose ages were stated in the year 1874, including the re-married, was 27·9 years for men, and 25·7 years for women. For 130,965 bachelors it was 25·7 years, and for 135,458 spinsters 24·3 years. The mean age of the widowers who re-married was 43·0 years, and of widows 39·4 years. A comparison of these results with those in 1867 shows that the mean age at marriage is slightly lower than it was.

The number of men who married in 1874 under 21 years of age was 16,919, and the number of women not of full age was 45,859; so that of every 100 men married 8·4 were not of full age, and of every 100 women who were married 22·7 were not of full age.

The proportions differ but little from those of the previous year, but are nearly double those of the year 1844, when they were 4·2 and 13·2 per cent. respectively.

Two girls were married, at the early ages of 14 years, by widowers whose ages were 24 and 40 years respectively. Of 6576 widows who were married to bachelors in 1874, and whose ages at marriage were stated, 12 were under 20 years of age.

Signature in Marriage Registers.—The marriage register abstracts show a gradual improvement in the state of the elementary education of the people, especially of women whose education has been unhappily neglected. In the year 1874 now under review, 36,117 men and 48,903 women were

obliged to sign the marriage register with marks, so 82·1 per cent. of the men, and 75·8 per cent. of the women, were able to write. Although these proportions are much larger than they were 30 years ago, when only 66·8 of the men and 50·4 of the women were able to write, still it is a deplorable fact, that 17·9 per cent. of men and 24·2 per cent of the women of England were unable to sign their names in writing.

The counties, &c. where education has been greatly neglected, and which have so frequently been referred to in previous reports as claiming most attention, are Monmouth, Bedford, Wales, Stafford, Hertford, Suffolk, and Norfolk, where from 26 to 32 per cent. of the men, and from 19 to 41 per cent. of the women were unable to write. The education of women has also been much neglected in the counties, &c. of Salop, Warwick, Nottingham, Chester, Lancaster, West Riding of York, and Durham.

It has been stated that proportionally more women could write in Scotland than men in England, and such was the case in the year 1862, when 79·7 per cent. of the women in Scotland, and 76·3 per cent. of the men in England signed in writing, and the respective proportions in the ten years 1862–71 were 79·1 for women in Scotland, and 78·5 for men in England, but this is no longer the case. More satisfactory progress has been made in recent years in England, and the results of educational efforts show now that proportionally more men can write in England than women in Scotland.

Elementary national education is now only beginning to make satisfactory progress, for it is estimated that at least 3,224,580 children in England and Wales should attend public elementary schools, but the average daily attendance at the 12,167 aided day schools in 1874 was only 1,678,759, while accommodation was provided for 2,871,826 scholars.

It appears, therefore, that all that is now wanting to complete the educational efforts of recent years is the adoption of some means to insure a better attendance at school, and this question is now receiving the attention of the Legislature.

The average *day and night* attendance has risen from 1,225,764 in 1870 to 1,727,449 in 1874.*

Buildings registered for Marriages.—The number of these buildings registered in 1874 was 239, bringing up the total number on the register at the end of the year to 7375. Of the 239 registered during the year 2 belonged to Presbyterians, 38 to Independents, 45 to Baptists, 1 to the United Brethren or Moravians, 15 to Roman Catholics, 5 to Unitarians, 105 to the various sects of Wesleyan Methodists, 16 to Calvinistic Methodists, 1 to the New Jerusalem Church, 2 to the Catholic and Apostolic Church, and 9 to other places of worship.†

Certified Places of Worship.—The number of places of meeting certified for religious worship during the year 1874 not being churches or chapels of the Established Church was 487. The number on the register on 31st December 1874 was 20,033. The following is a list of the various titles by which religious denominations have been certified to the Registrar General. The name printed in italics has been added since the publication of the list in my last Report.

---

Births.

The number of births registered in 1874 was 854,956, or 25,178 more than in the previous year. The rate was as high as 36·2 per 1000, while the annual average rate in the 10 years 1864–73, was 35·4 per 1000. The rate in 1874 in England was, of course, exceeded in the counties having the highest proportions of married women at the childbearing ages, such as Durham, where it was 46·7, Stafford 43·8, Monmouth 40·3, Lancaster 40·2, Northumberland 39·9, Derby 39·9, West Riding of York 39·7, Nottingham 39·2, South Wales 39·0, and Warwick 38·3.

Sex.—The number of male children born in 1874 was 435,179, of female 419,777, so 104 males were born to every 100 females: the proportions fluctuate considerably in the several counties in different years.

Births to a marriage.—Assuming that the interval between the mean age of marriage and the mean age of the mothers in England is 6 years, then the legitimate births in 1874 divided by the average number of marriages in the three years 1867–9 will give the average number of births to a marriage—4·57. In the year 1864 the proportional number was 4·30, so to every 100 marriages in England there are now 457 births, whereas ten years ago there were 430, or 27 less. This is no doubt owing to some improvement in the registration of births. The annual number of legitimate births to every 100 married women aged 15 and under 55, in the 10 years 1861–70, was 22·35.

Children born out of Wedlock.—The rate of illegitimacy in England is declining. Of the 854,956 children whose births were registered in 1874 43,103 were born out of wedlock, so 5 per cent. of the total births registered were illegitimate. Since the year 1845 when the per-centage was 7, the proportional number of illegitimate births has gradually declined. No doubt many of the births that escape registration are those of illegitimate children, still there is no reason to believe that a greater proportion escape registration now, than formerly, especially as the registrars have an interest in recording every birth, but the results of 1875, the first year of compulsory registration of births, will supply fuller information on this subject. The proportional number of illegitimate births, annually, to every 100 spinsters and widows, aged 15 and under 55, in England, was 1·66 in the ten years 1851–60 and 1·64 in the following decade 1861–70.

Deaths.

526,632 deaths were registered in England in the year 1874, or 34,112 more than in the previous year. The rate of mortality for the year was 22·3 per 1000 of population, exactly the same as the mean rate in 1838–74, but 1·2 per 1000 above the rate of the previous year. Nearly one half of the above excess was specially attributable to scarlet fever and measles, while atmospheric and other agencies raised the deaths from many causes.

An inquiry into the *causes* of the deaths of the year, by Dr. Farr, —showing which of these have prevailed with mitigated severity—will be found in the Appendix to this Report, pp. 219–224.

Certain zymotic diseases have a tendency to return in cycles of longer or shorter periods, and communities generally suffer from such epidemics in proportion to their sanitary condition. One after another the defects in the sanitary laws of the country are being removed and it is impossible to overrate the importance of the sanitary inquiries and inspection now carried on through the agency of the Medical Department of the Local Government Board.

The information relating to the local prevalence of any disease, obtained from my Quarterly Returns, from the Registrars of Births and Deaths, from the Medical Officers of Health, and from other authorities, enables special local inquiries to be immediately instituted by personal medical inspection, or by correspondence, and this must result, sooner or later, in an improved state of the health of the people inhabiting the urban and rural sanitary districts: it is in this way that the greater part of the country will in process of time come under sanitary surveillance.

The number of sanitary jurisdictions in England in 1874 was 1558. In about 900 of these the Local Government Board pays part of the local salaries and is consequently entitled to receive copies of the reports of the Medical Officers of Health, but with respect to about 658 jurisdictions, in which no such assistance is afforded, the Board is not entitled to receive the reports. The precise number of Medical Officers of Health is unknown.

Sex and Age.—Of the 526,632 deaths registered in the year under review 272,178 were males and 254,454 were females. The male death-rate was 23·6 per 1000, the female 21·0 per 1000. These rates at all ages differed but little from the average in the 25 years 1848–72,* but a comparison of the mortality of children and adults, at the *different ages*, with the average annual rates in the 25 years shows that for both males and females the mortality at each period of age up to 35 was comparatively low. At and after that age the mortality was higher. The average rate observed in the 25 years includes periods when great epi-

* See Preliminary Tables, No. 27.

demics were prevalent. In the subjoined table the death-rate of the year is compared with the average in the ten years 1856–65 which was less disturbed by serious epidemics; but the general results are nearly the same.

There is a close connection between the climatic conditions of the atmosphere and the mortality. Temperature is one of the most important elements in regulating the death-rate, especially at the adult ages, and the excess or defect, in certain years, in the rates at the middle and advanced ages is greatly due to this cause.

The years in which the mortality, after the age of 35, was above the average, are generally those in which the meteorological elements have been very variable—a very low temperature of a few weeks duration perceptibly increasing the mortality from diseases of the respiratory organs. This is probably the cause of the excess in the death-rate after the age of 35 in the year 1874 when the mortality from this class of diseases was unusually high.

England and Wales.

Ages.	Annual Rate of Mortality per 1000 living.			
	In the 10 Years 1856–65.		In the Year 1874.	
	Males.	Females.	Males.	Females.
All Ages -	23·2	21·3	23·6	21·0
0—	73·0	63·3	72·0	61·7
5—	8·4	8·3	7·5	7·2
10—	4·7	4·8	4·0	4·0
15—	7·4	7·7	6·4	6·5
25—	9·5	9·7	9·7	9·2
35—	12·9	11·8	14·4	12·2
45—	17·9	15·1	20·6	15·8
55—	31·3	27·6	35·7	29·4
65—	66·4	56·4	70·7	61·6
75—	144·2	132·4	144·5	132·9
85—	306·8	279·5	307·5	273·7
95 and upwards	444·8	436·1	446·4	425·0

A comparison of the mortality of the two sexes shows that under 5 years of age the excess of mortality among boys is about one per cent., at the next age the excess is very slight, but from the periods of age 10 to 35 females die in greater proportion than males. At the ages 35–55, and at each subsequent period, the female is lower than the male rate.

It is believed that the expectation of life, at the different ages, among the married is greater than among the unmarried, but no abstracts showing the ages at death of the married and of the unmarried, have been made for England similar to those published for two years for Scotland. Such results would be interesting and instructive, and would enable me to show the difference between the mean age at death of the married, and of the single at marriageable ages; but such abstracts could only be made for married women and spinsters for England, as the deaths of *married men* are not yet distinguished from the deaths of unmarried men in the English registration schedule.

Seasons.—It is to be regretted that no means have been taken to trace the varied influences which meteorological phenomena exert on the laws of health or sickness. Little more is known at present than that low tem-

perature and cold north and east winds increase the fatality of certain diseases, but how far the other various meteorological elements of the year disturbed the ordinary death-rate is unknown.

The mortality is generally highest in the three months of January, February, and March, when the temperature is lowest, but it was not so in 1874. The mortality in the first three months of the year was 23·4, or 1·4 per 1000 below the average, with a mean temperature (41°·4) 1°·4 above the average of 26 years, and a rain-fall of 2·4 inches, which is less than one half the usual amount. In the second quarter of the year the mortality was at the annual rate of 21·0 per 1000, the average being 22·0 per 1000; the mean temperature was the same as the average 52°·8, but the rain-fall was deficient, being only 4·2 inches against an average fall of 5·7 inches. In the third quarter of the year the mortality (20·8) was about the average, and the temperature (60°·9) deviated but little from the average: the rain-fall was 6·2 inches or 1·1 inch below the average. The mortality is not regulated so much by the mean temperature of the quarter, as by the extremes of temperature: an extraordinary period of cold weather prevailed from the middle of November till the end of the year, hence the mortality in the fourth quarter was 23·8 per 1000, or nearly 2 per 1000 in excess of the average. The mean temperature was indeed low, being 42°·3, or 2° less than usual; the rain-fall, 7·2 inches, was near the average.

Full information respecting the meteorology of the year will be found in Mr. Glaisher's remarks on pages xxxii–iv.

Locality.—As previously stated, the mortality of England in the year 1874 was 22·3 per 1000. In ten English counties and in South Wales it was higher than this, but the mortality ranged from 17·0 in Dorsetshire to 28·3 in Lancashire.

In three Counties and one Riding of England,* the mortality is invariably very high, and their death-rate, in the year now under review, was higher than usual. If the sanitary laws had been administered in these places as well as they have been in London, no less than 26,400 lives would have been saved during the year, and if the mortality in 1874, in these three Counties and in the West Riding, had been at the same rate as that of London, the effect would have been to reduce the rate in England 1 per 1000; thus it is owing to the high rates continually prevailing in three or four counties, that the death-rate of the entire country is never below 20 per 1000.

Previously to the year 1865 the death-rates were computed for *counties* only, and the results exhibited a very wide range of mortality, but it was observed that all the highest rates occurred in those counties containing the great centres of the mining and manufacturing industries—where children abounded—so that it became necessary to ascertain the mortality in the large towns. These results are now published in a comparative form for each of the five years 1870–74.†

These large towns owing to their importance naturally attracted the early attention of the authorities, and in many of them the sanitary laws are, for the most part, now well administered, but it is to the sanitary supervision of the smaller town populations—represented by the urban and rural sanitary districts all over the country—especially in Lancashire and in the West Riding of York—that we must look for any reduction in the general death-rate of the country; and this great sanitary work is now ably carried out under the directions of the medical staff of the Local Government Board.

The annexed table shows the annual rate of mortality, (1) from all causes, and (2) from seven zymotic diseases in fifty *town districts*, in each of the years 1871–4.

---

* Lancashire, Durham, Northumberland, and the West Riding of York.

† See Preliminary Tables, No. 36.

Annual Rate of Mortality in each of the Years 1871–74, in Fifty Town Districts of England and Wales.

Note.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts in the last column approximately represent, are Municipal or Parliamentary.

* The area taken to represent the boroughs of Brighton, Rochdale, Huddersfield, and Halifax, was not co extensive throughout the four years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

There are many districts in England where the good effects of the sanitary administration of the last 20 or 30 years can be traced. Those in the annexed table may be cited as examples of such improvement.

Districts of England and Wales showing some Improvement in the Annual Rate of Mortality in the Three Decades 1841–50, 1851–60, and 1861–70.

* The District of Salisbury was abolished, and the sub-district of Salisbury transferred to the District of Alderbury, in the year 1869.

The district of North Witchford affords a striking instance of the important results that can be attained through health administration. The average annual mortality fell from 27 per 1000 in 1841–50, to 21 in 1851–60, and to 20 in 1861–70: in the four years 1871–4, the results are still more remarkable, the mortality being reduced to 17 per 1000.

In Whittlesey, a steady improvement in the mortality is also discernable from 25 per 1000 in 1841–50, and 23 per 1000 in 1851–60, to 21 per 1000 in 1861–70; in 1871–4 the rate fell to 19 per 1000.

In Wisbech sanitary supervision commenced soon after the cholera epidemic of 1854. In 1866 the town was supplied with pure water, and extensive sewerage works are now completed. The annual death-rate of this district has been reduced from 25 per 1000 in 1841–50 to 19 per 1000 in 1871–4.

The great land drainage works have had great influence in improving the health of the inhabitants of the Isle of Ely. By their means the atmosphere has been purified and dried, and the returns for Wisbech show a marked diminution in the death-rate from phthisis, the average annual mortality per 1000 living in the 10 years 1851–60, being 2·0, whereas in the ten years 1861–70 it was reduced to 1·6.

In Orsett the remarkable reduction in the death-rate during the 30 years 1841–70 is partly due to sanitary improvements, but mainly to the drainage of the land and consequent dryness of the soil. In the four years 1871–4 the mortality was only 17 per 1000. The annual rate of mortality from phthisis decreased from 2·8 per 1000 in 1851–60, to 1·9 per 1000 in 1861–70.

Reference has already been made in some of my previous reports to the good effects of drainage and water supply in the district of Salisbury. Before any improvements were made, the annual death-rate in 1841–50 was 28 per 1000, but by the year 1855 an excellent system of drainage was in operation, and the district was supplied with pure water, so the annual rate was reduced in 1851–60 to 24 per 1000, and in the following decade it was still further reduced to 20 per 1000. The *city* of Salisbury, with a

population in 1871 of 12,903, appears to be in a good sanitary condition, the annual mortality in the four years 1871–4 being at the rate of 21 per 1000.

In Wolverhampton the annual mortality has fallen from 28 per cent. in the 10 years 1851–60 to 24 in the four years 1871–4. Dr. Love, the Medical Officer of Health, attributes this reduction to various sanitary improvements carried out since 1858. In 1865 the town was entirely re-sewered, and a more wholesome water supply obtained, but much still remains to be done to put Wolverhampton in a good hygienic state.

The cause of the great improvement in the health of Coventry is attributed by Dr. Fenton to the progress of sanitary works. Such improvements have been the means of reducing the annual death-rate from 27 per 1000 in the 10 years 1841–50, to 25 per 1000 in the 10 years 1851–60, and to 21 per 1000 in the 10 years 1861–70. In the four years 1871–4 the mortality rose to 24 per 1000. This was owing to an epidemic of small-pox in 1871–2, and of scarlet fever among children in 1873–4.

Previously to any sanitary improvements in Macclesfield the mortality of this district, in 1841–50, was at the annual rate of 26 per 1000. In 1853–6, sewerage works were executed; in 1851–2, the town was provided with an improved water supply, and various other sanitary measures were adopted, but the condition of Macclesfield was far from satisfactory, for the mortality of the district, in 1851–60, was 25 per 1000. In the following decade however, 1861–70, it fell to 23 per 1000.

Kingston-upon-Hull presents another example of the good effects of sanitary measures. Mr. Holden, the Medical Officer of Health, states that cholera was appallingly fatal in 1849; in proportion to population, it suffered more from cholera than any district in the kingdom.* The annual rate of mortality, from all causes, in the 10 years 1841–50, was 31 per 1000. An investigation showed that the drainage was bad, and the water—derived entirely from the river Hull—received the sewage of such places as Driffield and Beverley. The Local Board of Health, incorporated in 1851, began to carry out sanitary improvements, and in the 10 years 1851–60, the mortality was reduced to 25 per 1000. In 1864 the river water was abandoned, and the town received a constant supply of pure water from the springs rising out of the chalk wolds at Derringham. What has been effected is encouraging, but the mortality of Hull may be still further diminished, for in the 10 years 1861–70 the mortality was 26 per 1000, and during the four years 1871–4 it was 25 per 1000.

The improvement in the health of Newport is attributed by Dr. Davies to the extensive and complete system of drainage executed chiefly between 1851 and 1860, by means of which the sewage was swept into a tidal river about three miles from its mouth. The effect of the drainage has also been attended with the beneficial result of lowering the subsoil water. The town now receives a constant supply of good water. The mortality declined from 24 in 1841–50, and 22 in 1851–60, to 21 in 1861–70.

The mortality of the district of Merthyr Tydfil—the great centre of the iron manufactures of South Wales—in 1841–50, and in 1851–60, was at the high average annual rates of 28 and 29 per 1000 respectively. This was attributed by Mr. Dyke, the medical officer of health, to deficient drainage, to the absence of any system of scavenging, and to a scanty and impure water supply. In the year 1866 the drainage was completed, and a plentiful supply of pure water obtained, so that the annual rate in 1861–70 averaged only 25 per 1000. The sanitary state of the town, however, was not satisfactory, for the mortality in the four years 1871–4

* See Report on the Mortality of Cholera in England, 1848–9. By Dr. Farr, F.R.S., D.C.L., &c., pp. xxxvi—viii.

rose to 27 per 1000, owing to the prevalence of small-pox in 1872, of enteric fever in 1873, and of contagious fevers in 1874.*

The improvement in Crickhowell is mainly due to sanitary arrangements in the urban district of Brymnaur, which has been thoroughly drained and provided with an ample supply of pure water. Sanitary improvements are in progress, however, in various parts of Crickhowell. The mortality in the 10 years 1841–50 was at the annual rate of 27 per 1000; in the following decade, 1851–60, it fell to 25 per 1000, and in 1861–70 there was a further reduction to 23 per 1000, at which rate it continued during the four years 1871–4.

There are two districts in England exceptionally healthy; Glendale and Rothbury.† Their annual mortality during the 30 years 1840–71 was at the low average rate of 15 per 1000.

In Rothbury, a third of the population is employed in healthy occupations connected with agriculture. The remarkable low death-rates, ruling at the different ages, are shown in the subjoined table, where they are compared with the rates in the healthiest parts of England :—

Ages.	Rothbury District.			Healthy Districts. of England.	Division II. South Eastern Counties.
	Mean Population, 1861–71.	Deaths in the 10 Years 1861–70.	Annual Mortality. — Deaths to 1000 living.	Annual Mortality. — Deaths to 1000 living.

* The results of sanitary work in the *parish* of Merthyr Tydfil are thus recorded by Mr. Dyke:—

	Death-rate.
1. Before any works of sanitary improvements were begun; in the 11 years 1845–55 - - - -	33 per 1000
2. During works of paving, inspection, and nuisance removal; in the 6 years 1856–61 - - -	28 "
3. After the addition of the water supply, and during the formation of main drainage; in the 4 years 1862–65 -	26 "
4. While drainage of houses was being effected; in the 7 years 1866–72 - - - - -	25 "

† In the Rothbury district the village of Harbottle has 120 inhabitants, and Dr. Frank Richardson states that among them are 37 children under 14 years of age. During the last 20 years no child has died. He gives another instance of the vitality of children in the parish. "A farmer and his three shepherds, who have occupied their present "situations nearly 30 years, have among them 47 children, and not a single death has "occurred in these families. The inhabitants have abundance of plain substantial "food, excellent water, good residences as a rule, and regular but not severe work in a "pure bracing atmosphere; they are highly intelligent and generally abstemious. I am "indebted to the Rev. A. Procter, who has been upwards of 40 years the esteemed vicar, "for the corroboration of the statistics of this parish which I have now given you."

Such exceptional cases are well worthy of study; and our young Health officers may learn a useful lesson of hygiene from these farmers and shepherds living on the southern slopes of the Cheviot Hills. Dr. Benjamin Richardson can scarcely hope that the mothers of his Hygiea will be more successful in rearing children—their lambs—than these shepherds' wives.

The district of Rothbury contains several very large ancient parishes. That of Alwinton on the southern slopes of the Cheviots extends over 46,681 acres, and comprises 16 townships. The population of this parish decreased from 1325 in 1861, to 1205 in 1871, when 39 births and only 9 deaths were registered, so the birth-rate of the parish in 1871 was 32·4 per 1000 of population, whereas the death-rate was but 7·5 per 1000.

The nine deaths registered during that year included two of infants under one of age, one of a person 25 years, three aged 50 and under 60, one aged 68 years, and another aged 92 years.

In the year 1874 only six deaths were registered, and assuming the population to have been stationary since 1871, the mortality was at the rate of only 5 per 1000.

Death-rates of Children.—The high rate of infant mortality in our large towns is attracting serious attention. It will be seen in the subjoined Table (No. 1) that a much larger proportion of infants under one year of age died in some towns than in others. In Liverpool, for instance, out of every 1000 births registered, the lamentably large number of 239 perished annually in the 5 years 1870–74, whereas the proportional number in London was 161, and in Portsmouth 148. In towns where a considerable proportion of the mothers were employed at factories, the results differed from those above: thus in Oldham the proportional number was 179, in Salford 192, and in Leicester 226. There were exceptional causes in operation in Leicester which have been reported on at the instance of the authorities. Among others the river was dammed up by mills, and the subsoil was consequently saturated: and it is suspected that infants were fed with milk from cows which drank water contaminated by sewage.

Table No. 1.—Mortality of Children under One Year of Age from All Causes in Eighteen large Towns, 1870–74.

Boroughs, &c.	Proportional Number of Deaths under One Year to every 1000 Births registered in 52 or 53 Weeks in each Year.					Average Number in the 5 Years 1870–74.

Leicester	235	241	228	213	215	226
Liverpool	259	269	222	213	233	239

The principal causes which contributed to keep up these high rates of mortality among infants were teething, diarrhœa, convulsions, lung diseases, tubercular diseases, atrophy and debility, premature birth, and suffocation, and to these may be added the three epidemic diseases incidental to childhood, viz., measles, scarlet fever, and whooping-cough. The relative proportion of the fatality of these diseases in these six different towns is shown in the annexed Table (No. 2).

TABLE No. 2.—MORTALITY of CHILDREN UNDER ONE YEAR of AGE FROM DIFFERENT CAUSES, in SIX LARGE TOWNS, 1873–74.*

BOROUGHS, &c.	NUMBER of DEATHS UNDER ONE YEAR OF AGE ANNUALLY in the Two Years 1873-74 to every 1000 BIRTHS REGISTERED.

* The results in this Table are deduced from the returns published in the Annual Reports of the Medical Officers of Health.

Thus in Liverpool where the highest mortality of infants prevailed, the proportional number of deaths from diarrhœa, convulsions, lung diseases, atrophy, and suffocation, was considerably higher than it was in London. The large number of infants suffocated in Liverpool demands special inquiry.

In the factory towns of Oldham, Salford, and Leicester the proportional numbers who died from convulsions were much larger than the number who died from this cause in London. It is not improbable that this is partly owing to maternal neglect. Dr. Tatham, the Medical Officer of Health for Salford suggests some legislative enactment for the greater protection of infant life in this class of towns, so as to check the employment of mothers in factories within a certain period after their confinement. Dr. Sutton the Medical Officer of Health for Oldham, also states that the high rate of mortality among infants was mainly owing to the absence of the mothers, who were occupied at the mills. The children suffer from indigestible food, and are pacified with soothing syrups containing narcotics, which engender convulsions, and combined with other causes rapidly destroy life.

The mortality from teething, lung diseases, atrophy, and premature birth was high in Oldham.

Summer diarrhœa—one of the most fatal maladies of infants in the large towns—appears to be brought about by heat in conjunction with certain local conditions of insalubrity. The question as to what those precise conditions are is now engaging the earnest attention of medical statists. The mortality from diarrhœa was excessive in Leicester, and so was the mortality from congenital atrophy.

The mortality from premature birth was highest in the factory towns.

In my last report attention was directed to the high rate of mortality in 1873 among children under five years of age which was stated to be 61·5 per 1000: this year, 1874, it was 66·9. A review of the different counties, &c. shows that the mortality of children at this age was highest in Lancaster 95·7, Durham 87·8, West Riding of York 82·9, Northumberland 78·0, Monmouth 77·6, Warwick 77·2, Stafford 75·8, Nottingham 74·7, South Wales 74·5, and London 71·3.

In the large towns these rates were exceeded, and through the courtesy of the Medical Officers of Health, who have furnished me with the number of deaths of children under five years of age for the year 1874, I am enabled to show the mortality in fourteen of these towns. The rate was

highest in Liverpool, 119·1 per 1000, Oldham 105·3, and Salford 100·9, then follow Leeds 99·2, Newcastle-on-Tyne 93·6, Manchester 93·2, Sheffield 91·7, Nottingham 91·5, Birmingham 90·5, and Leicester 86·7: the lowest rates were in Sunderland 77·8, Wolverhampton 76·6, London 71·2, Norwich 67·3, and Portsmouth 63·7.

In Liverpool more children, of this age, died from lung diseases than from diarrhœa, or diseases of the brain, and the high rate of mortality there was mainly due to those three causes; the proportional numbers dying from the usual epidemics of children—measles, scarlatina, and whooping-cough, not being so great.

Deaths in Public Institutions.—The tables relating to the number of deaths registered in Public Institutions of England and Wales * show that 45,865 or 8·7 per cent. of the total deaths in the year 1874 occurred in 1338 of the principal public institutions in England and Wales. Of these 45,865 deaths 29,415, or 64 per cent. occurred in 715 workhouses, 11,963, or 26 per cent. in 544 hospitals, and 4487, or 10 per cent. in 79 lunatic asylums. Only those deaths registered in workhouses, hospitals, infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by the three classes of institutions. The increase in the total number of hospitals (44) during the year 1874 is mainly owing to a further extension of the system of cottage hospitals.

An introductory note on page 99 explains that the Table of Deaths registered in the Principal Public Institutions situate in the several districts and and sub-districts (pp. 102–118) affords the means of correcting the mortality, which in some districts is unduly raised, owing to the number of deaths registered in hospitals and other large institutions within their limits.

A reprint of the table published in my annual summary for 1874 showing the number of Deaths registered in all public institutions of London is appended to this report.† In the 52 weeks of that year 13,359 deaths were registered in 152 public institutions. Of every 1000 of these deaths, 571 occurred in fifty-two workhouses, 5 occurred in twelve prisons, 6 in two military asylums, 323 in thirty-seven general hospitals, 29 in twenty-eight hospitals for special diseases, 6, viz., 1 woman and 5 children, in five lying-in hospitals, 15 in four naval and military hospitals, 9 in three hospitals for foreigners, and 36 in nine lunatic asylums.

Progress of Registration.

Names on the Registers, and Searches.—The names of the 1,785,608 persons, whose marriages, births, and deaths were recorded in the registers during the year 1874, have been inscribed in printed alphabetical Indexes deposited at this office.

These records, for the convenience of public reference, extend from the middle of the year 1837 to the end of 1874, and comprehend an aggregate number of names amounting to 52,278,834.

The annexed results show how rapidly the annual number of searches at this office is increasing. They are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

Years.	Total Number of Searches.	Average Annual Number.
1845–9	4,758	952
1850–4	8,344	1,669
1855–9	17,425	3,485
1860–4	35,127	7,025
1865–9	56,544	11,309
1870–4	91,458	18,292

* See pp. 99–118. † See Preliminary Tables No. 37.

A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, and for boys about to be employed as messengers, &c. for post office purposes.

Of the 21,518 searches in 1874, certificates were granted in 17,190 instances. Registration certificates of 7539 births, 7046 deaths, and 2605 marriages were issued.

The total number of searches in 1874 (including those relating to the non-parochial and other records) was 22,354 and the number of certificates granted was 17,730.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1874 was 3,364*l.* 7*s.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report (pp. xxi–ii).

United Kingdom.

The estimated population of the United Kingdom at the middle of the year 1874 was 32,426,369. The emigration statistics of Ireland show that 73,184 natives left that country during the year, against 90,149 in the year 1873.

The number of births registered in Ireland in 1874, was only 141,288, or 26·6 per 1000 of population, the number of deaths registered was 91,961, or 17·3 per 1000. The excess of births over deaths registered was 49,327. The number of marriages returned was only 24,481, the marriage-rate being 9·2 per 1000. The above numbers are considerably understated, and the Registrar General of Ireland, in his last report, continues to direct attention to the defective state of civil registration.*

The estimated population of Scotland in 1874 was 3,462,916. The birth-rate of Scotland was lower than that of England, its death-rate was higher—23·3 against 22·3 per 1000 of population. The marriage-rate (persons married to 1000 persons living) in England was, as usual, considerably higher than that in Scotland—17·1 against 15·2.

The Army.

The particulars of the deaths in the Army abroad are not returned to this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad. The average strength of the army at home and abroad in the year 1874, was 186,389, and the number of deaths was 2136; the rate of mortality was therefore 11·5 per 1000 of mean strength; nearly the same as that in 1873.

At home, the average strength was 97,635, the deaths were 1007, and the rate of mortality per 1000 of mean strength was 16·1 among officers, and 10·0 among non-commissioned officers and men, against an annual average of 9·2 and 11·4 respectively in the twelve years 1861–72, so the mortality of officers was considerably above the average, while the mortality of the non-commissioned officers and men was below the average. The mortality in the year 1874 was higher than that of the previous year. This—according to the Army Medical Department Report—was chiefly attributable to the unfavourable causes affecting the health of the general population in England as shown in a higher death-rate. The mortality of the army at home was also somewhat unduly raised by "*accidents*," and by many invalids from abroad joining their depôts instead of going to

* See Eleventh detailed Annual Report of the Registrar General of Ireland, abstracts of 1874, p. 15.

Netley, the result being that more deaths were attributed to the force serving at home than were due to illness contracted there.

Abroad the mortality of the army was below the average during the year 1874. The strength was 88,754, the deaths were 1129, and the rate of mortality per 1000 was 13·8 among officers, and 12·7 among non-commissioned officers and men, against an annual average in the twelve years 1861–72 of 14·0 and 19·3 respectively.

The Navy.

Dr. Mackay, the Deputy Inspector General of the Royal Navy in his Report to Sir A. Armstrong, the Director-General of the Medical Department, says that the general sanitary condition of the service afloat was very satisfactory during the year 1874.

The total force was 44,530, and the deaths were 422, so the rate of mortality was 9·4 per 1000 against 8·3 in the previous year.

This increase of 1·1 per 1000 was mainly due to an outbreak of yellow fever in the receiving ship permanently stationed at Rio de Janeiro. The highest rate of sickness occurred in the China Station.

The operations in connection with the Ashantee Campaign on the West Coast of Africa raised the ratio from invaliding, but the mortality there was lower than in the preceding year.

The number of deaths in the total force from disease was 301, and from wounds, injuries, and drowning 121. The death-rate from disease was 6·7 per 1000, and from violence 2·7 per 1000, against 6·0 and 2·3 respectively in 1873.

Of the 301 deaths from disease 20 were referred to enteric fever, 13 to yellow fever, 18 to remittent fever, 63 to consumption, 21 to heart disease, 12 to aneurism, 33 to pneumonia, 10 to dysentry, 14 to stomach disease, 9 to kidney disease, and 3 to delirium tremens. In every 100 deaths 28·7 were from wounds, injuries, or drowning.

The mean force employed on the *home* station was 22,500, and the deaths were 175, being in the proportion of 7·7 per 1000, against 6·1 in the previous year.

The annexed Table shows the mortality at the different Stations during the years 1873 and 1874:—

Stations.	Deaths per 1,000 Force.

* Including the deaths by the loss of Her Majesty's ship "Captain."
† Including the deaths by the loss of Her Majesty's ship "Bombay."

Births and Deaths of British Subjects at Sea.

Marine Register Book.—The number of returns relating to births and deaths of British subjects at sea transmitted to me by captains or commanding officers of British vessels, previously to the passing of the new Registration Act is very imperfect. Particulars of only 111 of such births, and 301 of such deaths, were reported to me in 1874, whereas the number of births and deaths of British subjects at sea reported to the Registrar-General of Merchant Shipping and Seamen was 510 and 1733 respectively. These records will be more complete now that the Registration Act of 1874 is in operation, for by the 37th section of that Act every captain or master, or other person having charge of a ship and failing to forward the necessary particulars, is liable to a penalty not exceeding 5*l.* for each offence.

Compared with the previous year there is an increase in the number of births and deaths reported to the Registrar-General of Merchant Shipping and Seamen in 1874 of 201, and 532, respectively, so, although the Registration Act did not come into operation until January 1875, it is probable that more care has already been exercised to secure correct returns.

Mercantile Marine.—The number of mariners at sea, exclusive of masters, in the year 1874, as reported by the Registrar-General of Shipping and Seamen, was 203,606. The deaths were 4602, and the rate of mortality was 22·6 per 1000 strength: this rate was above the average (21·5) of 23 years.

The number of mariners in the merchant service, exclusive of masters, whose deaths were referred to drowning, together with the mortality by drowning in the Royal Navy in each of the years 1866–74, are shown in the annexed Table.

Deaths by Drowning in the Nine Years 1866–74.

Years.	Merchant Service.							Royal Navy.		
	Strength.	Deaths.			Mortality per 1000 Strength.			Strength.	Deaths.	Mortality per 1000 Strength.

1866 -	196,371	1171	1219	2390	6·0	6·2	12·2	49,475	65	1·3
1867 -	196,340	1808	1105	2913	9·2	5·6	14·8	51,000	82	1·6
1868 -	197,502	1785	1141	2926	9·0	5·8	14·8	51,220	78	1·5
1869 -	195,490	1770	1069	2839	9·0	5·5	14·5	48,820	75	1·5
1870 -	195,962	1655	989	2644	8·5	5·0	13·5	46,710	564*	12·1
1871 -	199,738	1500	976	2476	7·5	4·9	12·4	47,460	49	1·0
1872 -	203,720	1324	973	2297	6·5	4·8	11·3	46,830	67	1·4
1873 -	202,239	2231	1032	3263	11·0	5·1	16·1	45,440	48	1·1
Average in the 8 Years 1866–73 -	198,420	1656	1063	2719	8·3	5·4	13·7	48,369	129	2·7
1874 -	203,606	1819	1040	2859	8·9	5·1	14·0	44,530	78	1·8

* Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

In the 8 years 1866–73, 21,748 lives were lost in the merchant service by drowning, 13,244 by wreck, and 8504 by accident: the average annual number drowned in those years was 2719 or 13·7 per 1000 strength. The proportional number lost by wreck was 8·3 and by accident 5·4 per 1000.

The total loss in 1874 was 2859 lives, or 404 less than in the previous year, and as there was a decrease of 412 in the number of lives lost by *wreck*, it may be assumed that greater precautions were taken by the owners or masters of vessels to ensure the seaworthiness of their ships.

The average annual rate of mortality by drowning in the eight years 1866–73 in the Royal Navy was 2·7 per 1000 strength, so the risk of death by drowning in the merchant service was about *five times* as great as it was in the Royal Navy.

Wills.

Mr. Leslie in his annual report of Judicial Statistics for 1874, publishes a return from the Senior Registrar of the Court of Probate, showing that the number of probates and administrations granted at the Principal Registry during the year was 17,029. The value of the effects was sworn under 67,027,730*l.*

The returns furnished by the district Probate Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 25,972. The value of the property under which these probates and administrations were sworn was 52,343,775*l.*

The results for the Principal and District Registries combined were—probates and administrations 43,001—value of effects sworn under 119,371,505*l.* The average value of each being 2776*l.* against 2894*l.* in the previous year. The proportion of the cases in which people above the age of 21 left wills, or left estates on which letters of administration were taken was 1 in 6, or 16·1 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this Office.

EUROPEAN STATES.

The details relating to vital statistics in Foreign States will be found in a series of tables on pages cxxiii–cxxviii. The annexed Table shows the annual rates, per 1000 of population, of persons married, births, and deaths in the various States from which returns have been received.

European States.

Countries.	Average Annual Rates per 1000 Population in the Years 1853–74.								
	Persons Married.			Births.			Deaths.		
	In the 20 Years 1853–72.	In the Years 1873.	In the Years 1874.	In the 20 Years 1853–72.	In the Years 1873.	In the Years 1874.	In the 20 Years 1853–72.	In the Years 1873.	In the Years 1874.
England and Wales	16·9	17·6	17·1	34·8	35·5	36·2	22·4	21·1	22·3
Denmark - -	15·9	16·2	16·4	31·6	30·7	30·8	20·3	18·6	19·9
Sweden - - -	14·1	14·6	14·5	32·0	30·8	30·9	20·4	17·2	20·3

Spain* - - -	15·1	—	—	37·2	—	—	29·7	—	—
Italy* - - -	15·4	15·8	15·2	37·4	36·3	34·9	30·2	30·0	30·3

* The mean annual rates for Spain are for the ten years 1861–70, those for Italy are for the ten years 1863–72.

In comparing the average annual results in the 20 years 1853–72, with those for the years 1873 and 1874, it must be borne in mind that deaths in war contributed to raise the mortality unduly in Austria in 1866; in Prussia in 1866, 1870, and 1871, and in France in 1870 and 1871. For explanation as to any remarkable increase in the respective rates from epidemics, see notes at foot of Tables, pp. cxxiv-cxxviii.

A comparison of the results of civil registration in the year 1874, in the several European States, with those in the previous year (see table on preceding page), shows that the marriage-rate (persons married to 1000 living) fluctuated but little except in Prussia, and in France, in each of which Countries it fell about 1 per 1000; but the rates in each Country, except Italy, were higher than the average observed in the 20 years 1853–72.

The marriage-rate was highest in Prussia and Austria, and lowest in Sweden and Italy.

The birth-rates were nearly the same as those of the previous year, except in Italy, where there was a fall of 1·4 per 1000. The highest birth-rates were in Prussia and Austria, where the marriage-rates were highest.

The death-rates in Austria, Prussia, the Netherlands, and France were considerably lower than in 1873, and also lower than the average of 20 years. In the other States the mortality was near the average.

Density and Proximity.

A comparison of the inhabitants of a country with the area on which they dwell, shows the density and proximity of population, and these differ considerably in different countries.

Density and Proximity of Population in different European States in 1874.

European States.	Area in Square Kilometers.*	Estimated Population in 1874.	Hectars to a Person.†	Persons to a Square Kilometer.	Proximity or nearness of Person to Person in Meters.‡
England and Wales -	151,020	23,648,609	·6386	156·594	85·87
The Netherlands - -	32,811	3,767,263	·8710	114·817	100·29
Italy - - - -	291,821	27,289,958	1·0693	93·516	111·12
Prussia - - - -	347,004	25,185,522	1·3778	72·580	126·13
Austria - - - -	300,169	21,169,341	1·4179	70·525	127·96
France - - - -	528,333	36,397,000	1·4516	68·890	129·47
Denmark - - -	34,649	1,860,600	1·8623	53·697	146·64
Spain (1870) - - -	512,958	16,935,613	3·0289	33·016	187·02
Sweden - - - -	405,773	4,341,559	9·3462	10·700	328·51

Note.—The areas of Sweden, Prussia, and the Netherlands are exclusive of lakes and rivers; the area of Denmark is exclusive of lakes,

The areas in the above Table are those which were recently supplied by the Statistical Departments of the respective countries to the Board of Trade. They are here given in square kilometers, and the density and proximity in hectars and meters, in conformity with a resolution of the International Statistical Congress.

England has many cities, and there the density of population was greatest, for on an average the number of inhabitants to a square kilometer was 157. The Netherlands are second on the list 115, Italy is third 94; then follow Prussia 73, Austria 71, France 69, Denmark 54, Spain 33. In Sweden, where the population is sparse, there were only 11 persons to a square kilometer.

* A square kilometer equals ·3861162 of a square mile, or a square of 1000 meters to the side; a square kilometer also equals 100 hectars.

† A hectar contains nearly $2\frac{1}{2}$ or 2·4711436 acres.

‡ A meter is a little longer than a yard; it equals 1·093633 yard.

The proximity or nearness of person to person was, therefore, closest in England, where, on the hypothesis of equal distribution, the people were 86 meters apart, in the Netherlands 100, Italy 111, Prussia 126, Austria 128, France 129, Denmark 147, Spain 187, and Sweden 329.

In the rural districts of a country, wages are comparatively low, skilled labour is at a discount, means are not afforded for earning large sums, and this is generally expressed in a low marriage-rate. The same argument holds good, though not to the same extent, with reference to small town districts, but in the principal towns, and large manufacturing and mining districts, skilled labour is at a premium, high wages are earned, commercial prosperity reigns, large numbers of women at childbearing ages congregate, and the people marry in high proportions; so, although the marriage and birth-rates of a country are invariably highest where the population is dense, still it cannot be said that density is the chief cause.

Area and Density in 1874, in different European Cities
(*arranged according to Area*).

Cities.	Area in Square Miles.	Persons to an Acre.
London - - -	122·0	43·6
Paris - - - -	30·1	96·0
Berlin - - -	22·9	56·6
Vienna - - -	21·3	47·2
Munich - - -	19·9	14·5
The Hague - -	8·6	17·3
Turin - - - -	6·9	48·8
Amsterdam - -	5·5	79·6
Rome - - - -	5·4	71·2
Brussels - - -	3·5	83·5

Density of population, however, does greatly influence the mortality of a country, and it is instructive to compare the relative degree of density in different European cities with the death-rate. This has been done in the annexed table for the year 1874, but no conclusions can be drawn from such comparison until the average annual rate of mortality can be ascertained for a series of years, for prevailing epidemics greatly interfere with the results for a single year.

Density, Proximity, and Mortality in different European Cities in 1874
(*arranged according to Density*).

Cities.	Area.	Estimated Population in 1874.	Density of Population.		Proximity or nearness of Person to Person in Meters.	Mortality to 1000 Persons living.
	Square Kilometers.		Persons to a Hectar.	Persons to a Square Kilometer.		
Paris - - - -	78·02	1,851,792	237·3	23,734·8	6·97	22·4
Brussels - - -	8·97	185,000	206·3	20,630·1	7·48	23·9
Amsterdam - -	14·34	282,000	196·7	19,665·3	7·66	26·7
Rome - - -	14·11	248,307	175·9	17,594·0	8·10	27·5
Berlin - - -	59·20	828,000	139·9	13,986·7	9·09	32·9
Turin - - -	17·79	214,425	120·5	12,053·1	9·79	26·7
Vienna - - -	55·25	644,356	116·6	11,662·6	9·95	24·6
London - - -	315·97	3,400,701	107·6	10,762·8	10·36	22·5
The Hague - -	22·23	94,895	42·7	4,268·8	16·45	26·5
Munich - - -	51·56	185,000	35·9	3,588·3	17·94	(1875.) 37·4

Arranging the cities in their order of density, it appears that Paris is the most populous, with 237 persons to a hectar, Brussels stands next in order of density with 206 persons to a hectar, then follow Amsterdam with 197, Rome 176, Berlin 140, Turin 121, and Vienna 117. London is low down on the list with 108 persons to a hectar, but the Hague and Munich have the lowest densities, viz. 43 and 36 persons to a hectar respectively.

The proximity or nearness of person to person in Paris was 7·0 meters, in Brussels it was 7·5 meters, Amsterdam 7·7, Rome 8·1, Berlin 9·1, Turin 9·8, Vienna 10·0, London 10·4, the Hague 16·4, Munich 17·9.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

Remarks on the Meteorology of 1874.

By James Glaisher, Esq., F.R.S., &c.

The year 1874 was remarkable first for the extraordinary period of cold weather from the middle of November till the end of the year, and for the deficiency of rain during the whole year.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall, are primarily derived from the observations at the Royal Observatory, Greenwich, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The reading of the barometer decreased from 30·0 in., on January 1st, to 29·12 in. on the 3rd; increased to 30·2 in. on the 6th; was generally about 29·7 in. and 29·8 in., from the 8th to the 15th; decreased to 29·17 in. on the 16th, passed above 30·0 in. on the 21st, and continued at or above 30·0 in. till the end of the month. In February the readings continued high till the 13th, and after this day they were alternately above and below their averages till the end of the month. In March the readings were somewhat below their averages on the 8th, 9th, 10th, and 11th; again on the 19th, 29th, and 31st, on all other days they were above. During the month of April the barometer readings were variable, but generally below their averages from the 1st to the 14th; from the 15th to the 28th, a steady increase was experienced, and the maximum reading for the month 30·2 in., was attained on the last mentioned day. Throughout the month of May the readings were alternately above and below their averages. In June the barometer readings were above their averages from the 1st to the 23rd, below from the 24th to the 29th, and again above on the 30th, the highest reading in this month was 30·4 in., and the lowest 29·4 in., thus the range was 1·0 in. From the 1st to the 19th of July, the readings were variable, and generally above their averages, from the 20th to the 29th, they were below their averages, on the 30th and 31st the values were again in excess, but only to a small amount. From the 1st to the 14th of August, the readings were generally below their averages, the minimum occurring on the last-named day, viz., 29·3 in.; they were above their averages from the 15th to the 26th, the maximum value occurring during this period, 30·3 in., on the 21st; and they were again below from the 27th to the end of the month. During the period comprising the 1st to the 12th of September the values were all below their averages, from the 13th to the end of the month they were alternately above and below their average readings for short periods; the readings of the barometer from the 1st to the 16th of October were alternately above and below their averages, and from the 17th to the last day of the month, they were above (with the exception of two days, viz., 21st and 22nd, which were 0·33 in., and 0·19 in. below). From the 1st to the 11th of November the values were all above their averages, from the 12th to the 30th, below and above for short periods. From 1st to the 25th of December the readings were below their averages, except on a very few days, and from the 26th to the end of the year they were above.

Temperature.—The warm period which set in on 15th of December 1873, continued with very few and slight exceptions throughout the whole of January 1874, and until the 3rd day of February; the average daily excess of mean temperature for this period of 51 days was 4°·6, and for the 34 days from 1st of January to 3rd of February was 4°·7; during this lengthened warm period, the direction of the wind was usually a compound of the S. and W. On the 4th of February the wind was N.E., and a cold

period began, which continued till the 12th day, the average daily deficiency was $6\frac{1}{2}°$. On the 12th day of February the direction of the wind changed to S.W., and the temperature passed above the average, and continued above for 19 days, its average daily excess was 3°·1; this was followed by 10 days cold weather, from 4th of March to the 13th, and during this time snow fell generally over the country; from March 14th to the end of the month the weather was warm, the excess of daily temperature was $5\frac{1}{4}°$ nearly.

The mean temperature of January was remarkably high, being 41°·7, or 5°·4 *above* the average of 103 years, and during this period there have been only 9 Januaries of similar warmth, viz., 1796, 45°·3; 1804, 43°·2; 1834, 44°·4; 1846, 43°·7; 1851, 42°·9; 1852, 42°·0; 1853, 42°·4; 1863, 41°·8; and 1866, 42°·6. The warm period which began on 13th March continued with very slight exceptions throughout April, the average daily excess of temperature for this month being 4°. On several days towards the end of the month the days were warm, the excesses being as large as 10° and 13°. On 1st May a cold period set in, and continued without exception till the 21st; these three weeks of low temperature were very painful, following so immediately the heat of the preceding seven weeks. A period of warm weather occurred from the 22nd May to 11th June, the average daily excess was $4\frac{1}{2}°$, and from this time to the end of the month low temperatures prevailed, the deficiency of daily temperature for this period being $4\frac{1}{2}°$.

The mean temperature of April was 50°·0, and on travelling back 103 years we find that there have been but five Aprils of so high a temperature as in the year 1874.

The year	1779, 50°·7	The year	1865, 52°·3
„	1821, 50°·4	„	1869, 50°·3
„	1844, 51°·7		

The cold weather which prevailed during the last three weeks of June, was succeeded at the beginning of July by weather which was generally warm, but frequently cold; the average daily excess over the average daily temperature till 2nd of August was $2\frac{1}{2}°$. A period of moderately cold weather followed, (and with the exception of a few warm days), lasted till 19th September, the average daily deficiency for the 48 days ending September 19th was 1°; and from the 20th to the end of the month the weather was warm, the daily excess being 5°. From the 10th October to 20th November the weather was warm, with the exception of a very few days which were somewhat cold; but on November 21st a severe cold period set in and lasted with but few exceptions till 1st January 1875, the average daily temperature of the 42 days ending this day was 33°·5, being 6°·6 below the average; the temperature was on some days in December as much as 14° in defect of the average, and on December 31st it was as much as $16\frac{1}{2}°$ in defect, the mean temperature of this day was only 21°·1, the day being painfully cold.

Since the year 1771, there have been only 7 instances of so low a mean temperature as in December 1874, which was 33°·2. In the year

1874, 31°·0	1799, 32°·8	1844, 33°·0
1788, 29°·0	1840, 33°·3	1846, 32°·9
1796, 30°·4		

Rain-fall.—The fall of rain in January was 1 in., being only one half of the average fall; in February it was 0·94 in., being about two thirds of the average, and in March it was 0·45 in. only, being less than one third of the average. The total fall in the three months ending March 31st was 2·39 in.; the average fall for these three months is 5·0 in., so that the fall is less than one half of its usual amount; back to the year

1815 the instances of falls in these three months, not exceeding 3 in., were as follow :—

1820	it was 3·0 in.	1829	it was 2·4 in.
1854	„ 2·9 in.	1874	„ 2·4 in.

So that the only instance of so small a fall in these months was in the year 1829.

In April the fall was 1·4 in., being 0·3 in. below the average ; in May it was 0·4 in. only, being 1·7 in. below the average ; and in June it was 2·4 in., or 0·5 in. above the average. Of the remarkable deficiency in May there have been only 9 instances of falls of rain of less than one inch back to 1815, viz. :—the fall in the year

1823	was 0·8 in.	1844	was 0·4 in.	1857	was 0·6 in.
1829	„ 0·6 in.	1848	„ 0·4 in.	1870	„ 0·5 in.
1833	„ 0·2 in.	1851	„ 0·8 in.	1871	„ 0·6 in.

In July the fall of rain was 2·6 in., being 0·1 in. above the average ; in August it was 1·4 in., being 1·0 in. below the average ; and in September it was 2·2 in., being 0·2 in. below the average. The fall of rain in the last three months of the year was 7·2 in., being 0·2 in. in excess of the average ; the total fall in the year was 20·0 in., being 5·4 in. below the average annual fall, and, therefore, the fall of rain during the whole year was remarkably deficient, this deficiency having prevailed all over the country.

The total falls of rain in the year ranged from 51·29 in. at Stonyhurst, to 17·78 in. at Royston.

PRELIMINARY TABLES.

TABLE 1.—Estimated **Population,** and Number of **Marriages, Births,** and **Deaths** registered in **England** in each of the Thirty-seven Years **1838–74.**

YEARS ended Dec. 31st	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS (exclusive of Still-born).	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027

Mean in 37 years	16·5	33·9	22·3	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the number of persons living to every person married, birth or death, was 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 62, but no corrections have been made for the difference between an ordinary year of 365 days and leap year.

TABLE 3.—**Marriages** in **England** in each of the Thirty-four Years **1841–74**; those solemnized according to, and not according to, the Rites of the Established Church; with other details respecting the Marriages in the Churches of the Established Church.

Years ended 31st December	Total Marriages.*	According to the Rites of the Established Church.						Not according to the Rites of the Established Church.

1874 -	41,413	52,827	49,144	58,626	14·2	17·9	16·5	19·7
Mean Annual Rate per 1000 in each quarter during the 37 years					13·7	16·9	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 6.—**Marriages in England.** The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks,** and of Persons who were **Widowers** or **Widows,** in each of the Thirty-four Years **1841–74.**

Mean Annual Rate per 1000 in each Quarter during the 37 years					35·6	35·2	32·7	32·5

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, *see* note to Table 5.

TABLE **14.—Proportional** Number of **Births** in **England** in each **Quarter** to **1000 Births** in the **Average Quarter*** of each of the Thirty-seven Years **1838–74.**

Years.	Number of Births in the Average Quarter.	Proportional Number of Births.				
		In the Average Quarter (assumed to be 1000).	First Quarter ending March 31.	Second Quarter ending June 30.	Third Quarter ending Sept. 30.	Fourth Quarter ending Dec. 31.

Average proportion in 37 years, 1838–74 -			23·3	21·4	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths; to every 1000 females living there were 21·5 deaths; and to each 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of equal *numbers living* the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE **19.—Deaths** of **69 Persons** (16 Males and 53 Females) RETURNED as **Aged 100 Years and upwards** in ENGLAND and WALES during the Year **1874.**

District Numb.	DISTRICT.	DATE OF DEATH.	PLACE OF DEATH.	SEX.	STATED AGE.	OCCUPATION.	CAUSE OF DEATH.

Note.—The Table may thus be read :—Of each 1000 male children living under five years of age, 72·3 died in each of the 37 years 1838–74 ; in the five years 1841–45 this proportion averaged 69·0 per 1000 ; and in the five years 1866–70 it was 73·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841–71 (*see* Table 62, pp. xc–i), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE **23.**—ENGLAND.—**Annual Rate** of **Mortality** per 1000 of **Males** living at Twelve groups of Ages in each of the Thirty-seven Years **1838–74.***

1861–65	21·5	64·1	8·2	4·8	7·6	9·8	12·1	15·4	28·0	57·9	133·9	280·1	455·9
1866–70	21·2	63·4	7·4	4·3	7·1	9·6	12·0	15·8	28·0	59·4	136·0	275·7	411·2

Note.—The Table may thus be read:—Of each 1000 female children living under five years of age, 62·4 died in each of the 37 years 1838–74; in the five years 1841–45 this proportion averaged 58·8 per 1000; and in the five years 1866–70 it was 63·4.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841–71 (*see* Table 62, pp. xc-i), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

TABLE **25.**—ENGLAND.—**Annual Rate** of **Mortality** per **1000** of **Females** living at Twelve groups of Ages in each of the Thirty-seven Years **1838–74.***

Mean Annual Rate per 1000 in each Quarter during the 37 years					24·8	22·0	20·6	21·9

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, *see* note to Table 5.

TABLE **29.—Proportional Number** of **Deaths** in **England** in each **Quarter** to **1000 Deaths** in the **Average Quarter*** of each of the Thirty-seven Years **1838–74.**

Dudley - - - - M† -	43,413	2101	1248	48·4	28·7	5·4	Dudley Sub-district.
Worcester - - - M -	32,901	1025	727	31·2	22·1	3·1	Entire District.
Coventry - - - M -	39,627	1579	1032	39·8	26·0	6·4	Entire District.
VII.—North Midland Cos.							
Lincoln - - - - M† -	33,156	1236	810	37·3	24·4	5·3	Home Sub-district.
Derby - - - - M -	66,513	2573	1423	38·7	21·4	3·0	Entire District.
VIII.—North Western Cos.							
Stockport - - - M† -	58,894	2353	1865	40·0	31·7	5·8	Heaton Norris, and Stockport 1st and 2d Sub-districts.
Macclesfield - - - M† -	33,374	1161	895	34·8	26·8	3·6	East and West Macclesfield and Sutton Sub-districts.
Chester - - - - M† -	47,926	1484	1096	31·0	22·9	3·4	Castle and Cathedral Sub-districts.
Birkenhead - - - P -	69,779	2995	1577	42·9	22·6	4·3	Birkenhead and Tranmere Sub-districts.
Wigan - - - - M† -	39,594	1983	1471	50·1	37·2	10·2	Wigan Sub-district.
Bolton - - - - M† -	84,643	3304	2332	39·0	27·6	5·2	Little, Eastern, and Western Bolton Sub-districts.
Bury - - - - P† -	46,239	1780	1110	38·5	24·0	3·1	South and North Bury, and Elton Sub-districts.
Ashton-under-Lyne - M† -	30,676	1296	987	42·2	32·2	4·7	Ashton Town Sub-district.
Rochdale - - - M† -	50,496	1814	1262	35·9	25·0	3·7	Castleton nearer, Spotland nearer, and Wardleworth Sub-districts.
Blackburn - - - M† -	81,203	3305	2369	40·7	29·2	6·4	Blackburn Sub-district.
Preston - - - - M† -	86,236	3582	3110	41·5	36·1	10·6	Preston Sub-district.
IX.—Yorkshire.							
Huddersfield - - M† -	77,924	2758	1757	35·4	22·5	3·4	Almondbury, Kirkheaton, Huddersfield, & Lockwood Sub-dists.
Halifax - - - - M† -	84,586	2929	2077	34·6	24·6	4·8	Southowram, Halifax, and Northowram Sub-districts.
York - - - - M† -	57,873	1965	1290	34·0	22·3	3·2	Bootham, Micklegate, and Walmgate Sub-districts.
X.—Northern Counties.							
South Shields - - M -	88,562	3959	2317	44·7	26·2	5·5	Entire District.
Gateshead - - - M -	54,063	2562	1606	47·4	29·7	6·3	Gateshead Sub-district.
Tynemouth - - - M -	42,503	1613	1136	38·0	26·7	5·4	North Shields and Tynemouth Sub-dists.
Carlisle - - - - M† -	34,561	1199	1030	34·7	29·8	11·7	St. Cuthbert & St. Mary Sub-dists.
XI.—Monmouthsh. & Wales.							
Newport (Monmouth) M† -	31,760	1192	654	37·5	20·6	2·3	Newport Sub-district.
Cardiff - - - - M† -	72,205	2879	1681	39·9	23·3	4·4	Cardiff Sub-district.
Merthyr Tydfil - - P -	97,734	4302	3076	44·0	31·5	7·6	Lower and Upper Merthyr Tydfil, and Aberdare Sub-districts.
Swansea - - - M -	72,950	3418	2101	46·9	28·8	7·7	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts in the last column approximately represent, are Municipal or Parliamentary.

* The figures in this column are the numbers enumerated at the Census in April 1871, raised to the middle of 1874 by the addition of times the annual rate of increase which prevailed between 1861 and 1871. A decrease of population between 1861 and 1871 was shown in Portsmouth, Devonport, Dudley, Coventry, Macclesfield, and Ashton-under-Lyne; in these instances the enumerated population has been proportionally depressed on the same principle.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situated within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

Average Number living to One Annual Death in 35 years . . .	41	44	44	40	38	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered during the natural years from 1st January to 31st December.

Hampstead and Lewisham did not form part of London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

NOTE.—The numbers for 1837 were registered in the half year ending 31st December.

TABLE **45.—Area,** estimated **Population,** and **Marriages, Births,** and **Deaths** registered in the **United Kingdom,** in the Year **1874.**

—	Area in Statute Acres.	Area in Hectares.	Estimated Population in the middle of the Year 1874.	Marriages.	Persons Married.	Births.	Deaths.
United Kingdom	77,635,301	31,416,758	32,426,369	252,738	505,476	1,120,039	699,269
Great Britain - -	56,815,354	22,991,528	27,111,525	228,257	456,514	978,751	607,308
England and Wales -	37,319,221	15,102,008	23,648,609	202,010	404,020	854,956	526,632
Scotland - - -	19,496,133	7,889,520	3,462,916	26,247	52,494	123,795	80,676
Ireland * - - -	20,819,947	8,425,230	5,314,844	24,481	48,962	141,288	91,961

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE **46.—Proportion** per **1000** of **Marriages, Births,** and **Deaths** to the Population of the **United Kingdom,** in the Year **1874.**

—	Acres to a Person.	Hectares to a Person.	To 1000 Persons living.			
			Marriages.	Persons Married.	Births.	Deaths.
United Kingdom - -	2·39	·97	7·79	15·6	34·5	21·6
Great Britain - - -	2·10	·85	8·42	16·8	36·1	22·4
England and Wales - -	1·58	·64	8·54	17·1	36·2	22·3
Scotland - - - - -	5·63	2·28	7·58	15·2	35·7	23·3
Ireland - - - -	3·92	1·59	4·61	9·2	26·6	17·3

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

TABLE **47.—Population, Area, Births,** and **Deaths** in the **Islands** in the **British Seas** in the Twenty-four Years **1851–1874.**

Years.	Islands in the British Seas.		Isle of Man.		Island of Jersey.		Guernsey and adjacent Islands.

Total -	1,519,305	5,286,496	1,096,912	210,198	8,112,911

Average annual emigration from the United Kingdom - - - { From 1815 to 1874 - - 135,215; For the 10 years ending 1874 - 242,120 }

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815–24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

TABLE **49.—Emigration** in **1874.**

* The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 156 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, 96 in 1864, 140 in 1865, 184 in 1866, 97 in 1867, 81 in 1868, 51 in 1869, 27 in 1870, 24 in 1871, 1 in 1872, 6 in 1873, and 11 in 1874. The number is 1,665 in nineteen years, which, if added to the 12,374 above, makes 14,039, the total number of deaths of British subjects at sea in 1856-74, exclusive of those of merchant seamen. The Entries in the "Marine Register" of Births occurring in 1874 were but 111, and of Deaths 301.

In the 23 years 1852–74	4,250,190	91,510	21·5

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE **61.**—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,602 Seamen** reported to the BOARD OF TRADE as having died in the **British Merchant Service** in the Year 1874. (*Parliamentary Return, No.* 312, *Session of* 1875.)

TABLE 63.

ESTIMATED POPULATION OF THE UNITED KINGDOM,

(including ISLANDS in the BRITISH SEAS)

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 62, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in 1853; in Sweden in 1853, 1857, and 1866; in Austria in 1866 and 1873; in Prussia in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in 1871; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and 1864; in Austria in 1866; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

M. V. Falbe-Hansen remarks that an addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860.

* The populations for these years were enumerated at the respective Censuses.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—Previous to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

TABLE **68.**—SWEDEN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1850** to **1874.**

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.

† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths (the highest number in any year since 1801), scarlet fever 2418 deaths, and typhus and typhoid fever 2149 deaths.

TABLE **69.**—AUSTRIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1874.**

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 the States of Italy were included; since 1864, however, they are excluded.

* Census years.

† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE **70.**—PRUSSIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1874.**

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years. † Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

TABLE **73.**—SPAIN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Ten Years **1861** to **1870.**

1873*	—	—	—	—	—	—	—	—
1874*	—	—	—	—	—	—	—	—

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE **74.**—ITALY (inclusive of VENETIA). **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1863** to **1874.**

1874	27,289,958	207,997	415,994	951,658	827,253	15·2	34·9	30·3

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 is that enumerated at the census on the last day of December 1871. The population of Rome was first included with that of the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, not being legally recognized, escaped registration; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE **75.**—**Changes** in the **Constitution** of the **Superintendent Registrars' Districts** and **Registration Sub-districts** during the Year **1874.**

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District.]

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Coun (proper).

† These figures have been furnished to the Registrar Gen by the Ordnance Survey Department. They do not include s occupied by foreshore or tidal water of rivers and creeks.

ct of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1874.

Where the parties to a marriage are of different religious suasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases two ceremonies are entered as two marriages. This column includes 61 cases of marriage after divorce, viz., 27 *divorced men* who married spinsters, 18 bachelors who married *divorced women*, 5 *divorced men* who married widows, 9 widowers who married *divorced women*, and 2 *divorced men* who married *divorced women*. For the districts in which these marriages took place, see Table 10, p. xlv, of Report.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town or the largest part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department. They do not include space occupied by breakers or tidal water of rivers and creeks.

‡ Some of the births—especially of illegitimate children in London and large towns—escape registration.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1874—*continued.*

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1874—DISTRICTS—*continued.*

No.	DISTRICTS.	Area in Statute Acres.	Population, 1871.	Total Marriages.	Total Births.	Total Deaths.	Births Including Illegitimate Births. Males.	Births Including Illegitimate Births. Females.	Illegitimate Births. Males.	Illegitimate Births. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

* The Sub-districts are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1874 are given on pages 99–118.

* The Sub-districts of Newton, Cheetham, Failsworth, Blackley, and Prestwich (467 *a*, 1–5) which on 1st October 1874 were constituted a Superintendent Registrar's District, were prior to that date part of Manchester District (467). In this table of Births and Deaths the facts are inserted as if the alteration had taken place on 1st January 1874.

VIII.—NORTH WESTERN COUNTIES.—BIRTHS AND DEATHS, 1874—SUB-DISTRICTS—*continued.*

No.	SUB-DISTRICTS.	AREA in Statute Acres.	POPULATION, 1871.	TOTAL BIRTHS.	TOTAL DEATHS.	BIRTHS. Including Illegitimate Births. Males.	BIRTHS. Including Illegitimate Births. Females.	BIRTHS. Illegitimate Births. Males.	BIRTHS. Illegitimate Births. Females.	DEATHS. Males.	DEATHS. Females.	Excess of Births over Deaths.

DEATHS IN PUBLIC INSTITUTIONS,

1874.

THE FOLLOWING PAGES contain the numbers of deaths registered during 1874 in most of the public institutions of England. These figures will afford the means of correcting the mortality of districts and sub-districts where affected by the situation therein of these institutions, through the deaths recorded in them. The following list includes Workhouses, Hospitals, Infirmaries, and public Lunatic Asylums, while prisons, almshouses, schools, private lunatic asylums and benevolent asylums, are excluded. The list, as settled, includes 1338 institutions; of which 715 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 544 Hospitals or Infirmaries; and 79 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1338 institutions 45,865 deaths were registered during the year, or 8·7 per cent. of the total deaths in England and Wales, against 9·0 per cent. in the preceding year; 29,415 occurred in Workhouses, 11,963 in Hospitals, and 4487 in Lunatic Asylums. Each of these totals exceeded the corresponding numbers in 1873, and the proportion to total deaths was 5·5 in Workhouses, 2·3 in Hospitals, and 0·9 in Lunatic Asylums.

Deaths registered in **Public Institutions** of **England** in the **Year 1874.**

NOTE.—The Table may be read thus: Of the 272,178 deaths of Males, 71,794 were those of children under 1 year of age; 21,714 those of the age 1 and under 2 years; 10,503 of the age 5 and under 10 years; 6,031 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 16 males registered as aged 100 years and upwards; namely, 5 aged 100, 3 aged 101, 7 aged 102, and 1 aged 103 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 19, page lxxxiv, of Report.

The *Causes of Death* in England and in London, in combination with the Ages at Death, are given at pp. 144–159.

* The daughter of a labourer aged 14.

ENGLAND.—Supplementary Table of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all Diseases are classified in the Tables of Causes of Death, pp. 146–149, under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers

Tables (Miscellaneous) 225

Table of Causes of Death in England in 1874, classified in accordance with the Nomenclature drawn up by a Committee appointed by the Royal College of Physicians of London . . . 254

APPENDIX.

Letter to the Registrar General on the Causes of Death in England, by W. Farr, Esq., M.D., F.R.S.

Year 1874.

Sir,

The causes of death recur in these ages with great constancy. None of those great plagues which once swept away so many thousands of the people of England have been recently observed. At the same time, in modified forms, all the diseases that have been recorded in medical history remain; they are not easily stamped out; they are fatal year after year to certain numbers, and have to be kept under constant observation. The increase of population, the extension of navigation, the new industries, the marvellous chemical operations going on, the explosive forces, the machines, and the power of steam, every year in increased activity, have developed dangers unknown in other days; and have to be encountered by new remedies. Then nations are now so associated by intercourse that a disease generated among the lowest races in unfavourable conditions may spread to every other race, and carry off many victims.

I.—Zymotic Diseases.

Diphtheria, which first appeared in the Tables under a separate heading in 1855, was fatal to 3560 persons. It attacks children, but after the age of 45 it is more fatal than scarlet fever. This disease has a distinct character; and has existed, Dr. W. Squire asserts, from the earliest ages of medical history.* He finds the first recorded case in Hippocrates (Epid. lib. v.). Aretæus describes it. Fothergill calls it, in his remarkable Essay, sore throat with ulcers. Bretonneau investigated the epidemic at Tours in 1818; and it has since that been well known. Before the publication of his book it had not found so distinct a place in the nosology. The severe epidemic of France in 1855–7 reached England apparently through Boulogne. The disease afterwards appeared in the returns under the name of diphtheria, which Bretonneau had given it. Before it had been called putrid sore throat, or *cynanche maligna;* and it had no doubt often been confounded with scarlet fever, or croup. Cynanche maligna still occurs in the returns; but cases so returned are classed under diphtheria, with which it is really synonymous.

It is a remarkable fact that of diphtheria, out of the same number born more die in the healthy districts of England than in Liverpool:† the proportions are 1029 in the healthy districts and 442 in Liverpool out of 100,000 born.

The deaths from scarlet fever are 2140 in the healthy districts to 3830 in Liverpool; thus reversing the other proportions.‡ The population of

* See the able article of Dr. W. Squire, L.R.C.P., in Reynolds' System of Medicine (vol. I., p. 370), for an excellent summary of all that is known of this disease.

† For years 1861–70, see Supplement to Registrar-General's 35th Report, p. cxii.

‡ See Tables in Supplement to 35th Report.

the South Eastern Division is not more than two-thirds of the population of London; and yet the deaths from diphtheria (456) exceeded the deaths from that disease (419) in London. In Wales the deaths from diphtheria (340), in proportion to population, exceed the average. Generally it is more fatal where there are offensive privies than in towns with waterclosets; but cases are found in the year in variable numbers in every county, and almost in every district. Diphtheria is one of the diseases that should be carefully investigated. Sometimes it sweeps away several children of the same family.

Scarlet fever, alike in its mild and malignant forms as in its various complications, is now one of the zymotic diseases very fatal to young children. It is most fatal during the second, third, and fourth years; it pursues them relentlessly up to the tenth year; and fatal cases occur afterwards through life. The corrected mean age at death is 5·8 years; that from fatal measles being only 2·7, from whooping-cough 1·8 years.* In the year before us the deaths from scarlet fever were 24,922. Deaths occurred in the greater part of the districts of the kingdom: they can be traced in the tables, pp. 184–195. London suffered severely: the deaths were 2648. The Southern and Eastern Divisions had not many deaths. In the West Midland Division, Birmingham and parts of Staffordshire were the most conspicuous sufferers. Lancashire lost 6404 lives by this single disease, the West Riding of York 3779, Durham 1942, and South Wales 1388. The visitation was severe in the mining districts. The mean rate of mortality by scarlet fever was 1062 deaths to 1,000,000 of the population of the whole country; which is slightly above the average of the 25 years 1850–74: it was below the mortality (1461) in 1870, and was as high as the mortality of the two previous years.

Measles was more fatal than it is on the average; it was the cause of 12,255 deaths, a number rather in excess of the deaths by whooping-cough, 10,362. But the two diseases together are less fatal than scarlet fever.

Fever is now distinguished under its three forms of typhus, enteric, and simple continued. It has been proved beyond doubt that enteric fever (typhia), often called typhoid fever, is a distinct disease from typhus, with which it was confounded not only in the early history of medicine but late in the present century: the labors of the accurate Louis, of Dr. A. Patrick Stewart, Sir W. Jenner, and Dr. Murchison, have now distinguished enteric fever. No case of relapsing or famine fever has been returned in the year. The deaths by fever of the three forms were 13,735; by typhus 1762, by enteric fever 8861, and by simple continued fever 3112. The mortality to 1,000,000 living by fever in 1850–4 was at the rate of 995; and gradually fell to 657 in the five years 1870–4. The rate of mortality by typhus in the year 1869, when the three forms were first distinguished, was 197, 148 in 1870, 122 in 1871, and only 81, 71, 75 in the three years following. Thus typhus has declined; so has simple continued fever. Enteric fever, evidently due to a distinct cause, shows no symptom of decline in the corresponding years. Diarrhœa, in some points allied to enteric fever, is now more fatal than it was 20 years ago. It prevails chiefly in the heat of summer when the temperature of air and water rises above 60° Fahrenheit. It is not improbable that the mixture of sewage in water tends to spread this disease among children, to whom it is most fatal. Of the 21,204 deaths by diarrhœa, 18,024 occurred among children under 5 years of age. Cholera has only prevailed in the simple form, and has been fatal to few.

Rheumatic fever is a very serious disease in itself, and the consequential effects it leaves behind it in affections of the heart are of the most serious character. Unlike other zymotic diseases, it occurs chiefly in adults, and one attack leaves an increased liability to a second. Of the 3203 persons

* See Supplement to Registrar-General's 35th Report, p. xxxvii.

whose deaths were referred to rheumatism, 2981 were over 10 years of age; 1510 were males, 1471 females; at the ages 10 to 15, 20 to 25, rheumatism is the most fatal. It has most affinity to ague and remittent fever.

Enthetic diseases are produced by inoculation of specific matter. Those of most frequent occurrence are syphilis, gonorrhœa (and its consequence stricture,) hydrophobia, and glanders. Glanders is communicated by the horse, hydrophobia by the dog, to man. Glanders was fatal to four men; the deaths from this cause we may hope will be diminished as the men employed about horses grow more cautious. Hydrophobia was fatal to 61 persons; namely, to 49 males and 12 females; four were children under 5 years of age, eight were boys of 5–10; three were boys, three were girls, of 10–20; six were young men, one a young woman, of 20–25; 29 were men, seven women, of 25 and upwards. Hydrophobia, notwithstanding police regulations, is twice as fatal as it was 20 years ago.

Syphilis is communicated not by animals, but by men and women themselves afflicted by disease; and it was, as far as it was recorded, twice as fatal in the five years 1870–74 as it was 20 years ago. Its most fatal recorded forms occur in children under one year of age. Thus, of nearly 2000 deaths ascribed to syphilis, 1484 were babies under one year of age; of whom 770 were boys, 714 girls.

Special provision is required to prevent the diffusion of this disease; and there can be no doubt that the only effectual provision is reclusion of the sources of infection in infirmaries under well considered regulations.

Alcoholism became less fatal year by year until 1873. The deaths to 1,000,000 living by delirium tremens in the successive quinquenniads, from 1850 to 1874, were 29, 26, 24, 22, 16: the last year, 1874, delirium tremens broke out again with renewed violence, and the rate reverted to 21; while the deaths ascribed to intemperance, which had on an average been 17, rose to 24. The death-rate from alcoholism in both forms was higher than it had been for some years.

II.—Constitutional Diseases.

84,119 deaths were ascribed to constitutional diseases; namely, 17,791 to diseases of the diathetic order, and 66,328 to tubercular diseases, including scrofula, mesenteric disease, hydrocephalus, and phthisis. Among the diathetic diseases gout still holds its own: to it 542 deaths are directly referred. The proportion to 1,000,000 living that died of gout annually ranged from 12 to 13 in the three quinquenniads 1850–64. In 1865–69 the proportion rose to 18; in the five years 1870–74 to 21, 20, 20, 20, and 23. As is usual, the men suffer more than the women from gout; and the greatest number of deaths from gout in any decenniad of age occur at 65–75.

Cancer, one of the longest and most painful diseases to which mankind is subject, is growing more fatal. To it 4586 deaths were referred in 1847, 5826 in 1854, 8117 in 1864, and 11,011 in 1874. The proportion of annual deaths to 1,000,000 living was 302 in 1850–54, and 443 in 1870–74. The diagnosis of internal cancer has no doubt made considerable progress, and some cases which were formerly vaguely returned as tumors are now recognized as cancer in some of its forms; but the increase of cancer demands all the attention of pathologists. Great will be the merit of the physician who discovers how its attacks can be warded off, or its ravages arrested. It is worthy of note that of its victims 3470 are males, 7541 are females; and that the young are spared; most of the deaths occurring at ages above 45, when the reproductive forces have subsided. Under 45 years of age the number of deaths of males by cancer was 479, slightly in excess of the 427 deaths of females. At ages over 45 the deaths of males were 2991, of females 7114. The forces that

had been expended, especially in the female, in building up normal organizations were diverted towards heterologous structures. The breasts, the uterus, the glands are the most common seats of scirrhus disease. The hæmatoid disease is most frequent in children.

The tubercular diseases show some signs of subsidence. The mortality from this order of diseases is sensibly declining; while consumption, the most fatal of the diseases of the prime of life, destroyed in 1,000,000 living 2811 a year in the years 1850–54, it destroyed 2283 a year in 1870–74. During these last five years the decrease has still been going on; it was at the rate of 2435 in 1870, and 2104 in 1875.

III.—Local Diseases.

226,617 persons died of local diseases; including 68,014 of diseases of the nervous system; 29,956 of diseases of the organs of circulation; 90,612 of diseases of the respiratory organs; and 23,917 of diseases of the digestive organs. There is a general increase in the deaths from all these orders of diseases. The increase in the fatal diseases of the circulatory organs is the greatest; next come diseases of the respiratory organs; the fatal diseases of the nervous system increased to some extent; those of the digestive organs declined in 1870–74.

While the rate of mortality from consumption and pneumonia declined, the mortality from bronchitis rapidly increased.

IV.—Developmental Diseases.

These diseases are incidental to the stages of development, nutrition, growth, and decay. To them 78,874 deaths were referred. They include 10,527 deaths of children prematurely born; 1496 of children malformed; 4317 of children dying in the process of teething; all of them under 5 years of age, and nearly all of them under 2 years of age, the boys dying in greater numbers than the girls.

Of the second order only women died: 116 died of paramenia; 2819 of diseases incidental to child-bearing: the greater part of them at the ages 25–45. One girl, the daughter of a laborer, died of childbirth at the age of 14. The case is well authenticated.

If we add the 3108 deaths from puerperal fever (metria) the total deaths referable to child-bearing was 5927. This implies 1 death of the mother to every 140 children born alive.

Of old age 12,495 men, and 16,109 women died, all over 65 years, and some over 100 years. Thus of 526,632 deaths no less than 498,028 were referred to injuries, diseases, and evident organic imperfections; 28,604 to old age.

A rather greater number, or 30,995 deaths, chiefly of young children, were referred to atrophy and debility.

V.—Violent Deaths.

17,920 persons died violent deaths in the year 1874. Happily in England none died in battle. 15,667 deaths were referred to accident or negligence; 409 to homicide: 1592 to suicide; and 18 to execution. The number of executions registered in the year is double the average. We have to go back to the years 1863–4 to find greater numbers.

13,414 males and 4506 females died violent deaths; so to one female three males are killed. 3978 of the number were children under 5 years of age: 2,232 were boys, 1746 were girls. As age advances the excess of deaths of males over deaths of females increases. Thus at the age 5–10 the deaths of boys by violence are 742, of girls 391, while at the

age 25–35 the deaths of men by violence are 1758, of women 233. At this stage of civilisation the men bear the brunt of the battle.

The causes of violent deaths are analysed in the Tables (pp. 196–216), which are in continuation of the Tables in previous Reports. Thus 1165 males and 84 females were killed on railways in some way or other. Of the males 743 are returned as having been run over on the line; 26 were killed by collision; 175 were crushed by carriages or engines. These deaths are now returned more accurately and completely than they were formerly to the Board of Trade; but it may be of use to give here the total deaths on railways from the time when they were distinguished in the annual reports of this office.

The following Table shows how rapidly the deaths on railways have increased since 1863. It is right to state that the number of miles of railway opened were 7,001 in 1858, 10,850 in 1871, and 11,622 in 1874. The receipts from passengers were 8,789,181*l.*, 15,476,126*l.*, and 18,774,836*l.* in the corresponding years.

DEATHS CONNECTED WITH RAILWAYS.

Years.	Males.	Females.	Total.
1863	607	40	647
1864	745	51	796
1865	885	62	947
1866	837	71	908
1867	822	55	877
1868	714	83	797
1869	735	56	791
1870	861	69	930
1871	1,042	84	1,126
1872	1,068	92	1,160
1873	1,185	105	1,290
1874	1,165	84	1,249
Total in 12 years, 1863–74 -	10,666	852	11,518
Annual Average -	888·8	71·0	959·8

Thus, if we take the receipts as an indication, it is probable that the passenger traffic has increased faster than the deaths of passengers, railway workmen, and strangers to the line. It is none the less true that there has been an absolute increase of violent deaths to the extent of 1249 in a year; deaths which would not have happened had no railways existed.

1313 persons were killed by horse conveyances, namely, 1113 males and 200 females. Carts, vans, and waggons are the great offenders. The tram-cars evidently require great care in their management; although they are not in such general use, they killed more people (62) than omnibuses (55). By cabs 61 persons were killed; by carriages 82; and this limitation of the numbers implies great skill on the part of the drivers in streets often crowded.

The deaths of males from injuries of various kinds in coal mines were 938, of females 4. From injuries connected with copper, tin, iron, and other mines 118 men died.

The total deaths referred directly to mechanical violence were 6,464, which have been classified, as far as the returns admitted of it, under several heads.

To chemical injuries the deaths of 1568 males and 1432 females are referred. By burns 610 males, 888 females died; the manner not being

stated in the great majority of cases. Still, it is evident that more women than men die by the clothes taking fire; for 300 deaths of females against 163 deaths of males are explicitly referred to this cause. Under five years of age the deaths of boys by burns are 338, of girls 298. At that age when the dress of many boys is as combustible as the dress of girls, the more daring sex die in greater numbers than girls.

Children in some numbers are killed every year by drinking scalding water too carelessly left in their way; 20 boys and 13 girls so died in 1874. The boys and girls, 33 in number, were thus distributed as to age; 8 were 1–2; 13 were 2–3; 5 were 3–4; 4 were 4–5; 2 were 5–10; and 1 was 10–15. The age of 2 and under 3 is that at which the young ones are just able to go about without help, and are yet uninstructed by experience how to avoid dangers.

395 males, including 305 under five years of age; and 297 females, including 263 under five years of age, were scalded to death under circumstances not defined.

86 persons, 73 males and 13 females, were destroyed by burns, scalds, and shocks of explosion; 30 by gunpowder, 3 by fireworks, 14 by gases, 1 by dynamite, 26 by steam, and 12 by ways not described. This is exclusive of 24 deaths directly referred to explosion of steam boilers.

25 boys and men were killed by lightning; nearly all following out-of-door occupations. No woman was killed by lightning.

Sunstroke was fatal to 71 males and to 19 females.

Cold on the other hand was fatal to many. 90 deaths of males and 24 of females were ascribed to "gelatio and exposure to cold." There were 17 of the number under five years of age; but the majority (48) were fifty-five years of age and upwards.

Deaths by poisoning increased in 1874; of 461 cases of such deaths 149 were suicides, and 312 were deaths by accident or negligence, murder or manslaughter. Thus, about one case in three deaths by poisoning were ascertained suicides.

2891 deaths by drowning inland or on the coast are recorded. This is exclusive of the cases of drowning out at sea and abroad.

I have previously noted the rapid increase of deaths by suffocation, to which 1560 deaths were ascribed in the year. The mode of suffocation is not stated in 346 cases; 73 persons were choked by food; 586 were smothered under the bed clothing, and 240 were overlaid.

The fact is certain; and the cause of the increase requires thorough investigation. The coroner of Newcastle-upon-Tyne, Mr. John T. Hoyle, thus writes to the Registrar General: "During the past six months I have held "twenty inquests where medical witnesses proved deaths by suffocation." He calls the Registrar General's attention "to the circumstances which "usually attend the sudden deaths of children, which have been very "frequent of late years in the borough." "In a great many cases it turns "out, on an inquest being held, that the children have been accidentally "suffocated in bed by the parents, very frequently either one or both of "them, going to bed in a state of intoxication." Here is another evil to be referred to the evil effects of excessive drinking.

I have the honor to be,
Sir,
Your obedient servant,
WILLIAM FARR.

To
The Registrar General.

APPENDIX TABLES,

1874.

TABLE 1.—**Causes of Death registered in Engla**

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1858 these have been distributed rateably over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population. ‡ Average in 10 years.

TABLE 4.* (*continued.*)—**Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **25 Years 1850–74,** and in each **Quinquenniad** of that Period; also the **Rate** of **Mortality** in the Years **1870, 1871, 1872, 1873,** and **1874.**

* The populations of these counties have been estimated to the middle of 1874 on the assumption that the rate of increase or decrease which prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1874; the county totals were then adjusted in order to cast to the estimated total population of England and Wales.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 271) *and "Index of certain Towns"* (page 281).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

Sub-District.	District.	No.
A		
Abbey	Bath	317; 3
Abbey Holme	Wigton	570; 2
Abbots Bromley	Uttoxeter	367; 2

SEASONS; Influence of, on Mortality . . . . . xvi–xvii

SEX; Number and Proportion of Males and Females born in and out of Wedlock in Counties in 1874. (Table 15.) l

Proportion of Male and Female Children born in the several Counties of England in each of the Years 1864–74. (Table 16.) . . li

(*See also* BIRTHS and DEATHS.)

SMALL-POX; Deaths and Mortality from, in Large Towns, 1870–74. (Table 18.—App.) 251

SPAIN; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1861–70 xxviii

Density and Proximity of Population in 1870. (Table) . . xxix

Marriage, Birth, and Death Rates compared with those of other European States. (Table 65.) xciii

Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths in each of the Years 1861–70. (Table 73.) xcvii

PAGES

STARVATION; Deaths from, in the Ten Years 1865–74, distinguishing Locality, Sex, and Age. (Table 10.—App.) 244

STATE MEDICINE, importance of the Study of vi

SUB-DISTRICTS; changes in the nomenclature of, during 1874. (Table 75.) xcviii

Alphabetical Index of 263–272

SUICIDES of Males and Females in England at different Ages during the Year 1874 207–208

of Males and Females in each of the Eleven Divisions during the Year 1874 209–210

Proportion to every 1,000,000 of the Population of England, 1859–74. (Table 2.—App.) 232–234

SWEDEN; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853–72, and in 1873 and 1874 . . xxviii

Density and Proximity of Population in 1874. (Table) . . xxix

Marriage, Birth, and Death Rates compared with those of other European States. (Table 65.) xciii

Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, 1850–74. (Table 68.) . . xcv

SYPHILIS, Deaths from 221

TEMPERATURE; Mean at Greenwich in each week of 1874. (Table 34.) . lxviii

Mean in 1874 in 21 large Towns of United Kingdom. (Table 36.) lxx

(*See also* METEOROLOGY.)

TOWN AND COUNTRY DISTRICTS; Mortality in 1874 . . . . . xvii–xxii

Area; Population 1861 and 1871; Annual Rate of Mortality per 1000 in each Quarter of the Years 1864–74. (Table 31.) . lxvi

TOWNS; Mean Temperature at Greenwich, Annual Rate of Mortality in each week of 1874, in London and 20 other large Towns of the United Kingdom. (Table 34.) lxviii

Population, Births, Deaths; Birth and Death Rates in 1874 in Fifty large Town Districts. (Table 35.) lxix

Population, Births, Deaths; Birth and Death Rates; Temperature and Rainfall in 1874, in London and Twenty large Towns of the United Kingdom. (Table 36.) lxx

Mortality in large English Towns in 1874. (Tables 16–17, App.) . 250

Deaths and Mortality in 17 Large Towns 1870–74, from Small-pox, Measles, Scarlet Fever, Diphtheria, Fever, and Diarrhœa. (Tables 18–23.—App.) 251–253

Index of certain Towns whose names differ from those of the District and Sub-district in which they are respectively situated . 273

TYPHUS. (*See* FEVER.)

UNITED KINGDOM; Population and Emigration in 1874 xxv

Area, Estimated Population, Marriages, Births, and Deaths, in the Year 1874. (Table 45.) lxxix

Proportion, per 1000, of Marriages, Births, and Deaths to the Population in 1874. (Table 46.) lxxix

Emigration in each of the Years 1815–74, distinguishing Destination. (Table 48.) lxxxi

Emigration in the Year 1874, distinguishing the Destination, Sex, Age, Condition, Occupation, and Origin of the Emigrants. (Tables 49, 50.) . . . . . lxxxii–lxxxiii

UNITED KINGDOM—*continued.* PAGES

Estimated Population of both Sexes, distinguishing England, Scotland, and Ireland, in the middle of each of the Years 1801–76, *excluding the Islands in the British Seas, the Army, Navy, and Merchant Seamen Abroad.* (Table 62.) . . . . . xc–xci

Estimated Population of both Sexes (*including the Islands in the British Seas, the Army, Navy, and Merchant Seamen Abroad*) in the middle of the Years 1801, 1811, 1821, 1831, 1841, 1851, 1861, and 1871, and the Logarithms of the same. (Tables 63, 64.) xcii

VIOLENT DEATHS of Males and Females in England at different Ages during the Year 1874 196–201

of Males and Females in each of the Eleven Divisions during the Year 1874 202–206
